

RICHARD W. BARSTOW

26, Tregeseal, St. Just,
Near Penzance, Cornwall, England.

Tel. No.: St. Just 880
(STD 073 677)

V.A.T. No.: 132-7852-67

ORDERING INFORMATION

Mail orders are promptly filled and despatched on a 7-day examination basis, subject to approval. Immediate refund guaranteed on return of specimen(s), in good condition.

Please quote the name and number of the specimen(s) required, and enclose P.O./Cheque with order. All prices are inclusive of V.A.T.

No charge is made for postage and packing, except for overseas customers and postage over 75p.

We reserve the right to make slight substitutions, if necessary, unless advised to the contrary.

Special requests and "wants lists" are welcome.

We hope that we may be of some service to you, and assure you of our best attention at all times.

JUNE 1975

1. ALBITE variety PERIOLINE. Bristenstock, Uri, Switzerland. Large, whitish, lustrous twinned crystals to 1" in size, with a slight dusting of greenish Chlorite, thickly intergrown and encrusting matrix. $4 \times 2\frac{1}{2}$ ". £7.50.
2. ANALCIME. Paterson, New Jersey, U.S.A. Sharp, lustrous, translucent glassy crystals to 1 cm. in size, richly intergrown and scattered on Basalt matrix, with minor Calcite in association. $3 \times 2\frac{1}{2}$ ". £8.
3. ANATASE. Javradi, Tavetsch, Graubunden, Switzerland. Very sharp, doubly terminated, bluish black crystals to 3 mm. in size, scattered on a matrix of well formed intergrown glassy Quartz crystals with minor Albite in association. $2 \times 1\frac{1}{4} \times 1\frac{1}{4}$ ". £8.
4. APATITE. Panasqueira, Biera-Biixa, Portugal. A large, translucent, sharp, well formed pale lime green coloured crystal, nearly 1" in size, implanted on Quartz with odd smaller Apatite crystals and Muscovite mica. $2\frac{1}{4} \times 1\frac{1}{4} \times 1$ ". £13.
5. APATITE. Wilberforce, Ontario, Canada. Lustrous, lime green, well formed hexagonal crystal section $1\frac{1}{4}$ " long x over $\frac{1}{4}$ " across the axis, partially embedded in Calcite matrix. $2\frac{1}{2} \times 2$ ". £2.50.
6. ARAGONITE variety "Flos-ferri". Eisenerz, Styria, Austria. Choice, silky white, tubose ramifying masses thickly intergrown and covering matrix. A very well developed example of this mineral with very attractive form for display. $4 \times 2\frac{1}{2}$ ". £11.
7. ARSENOPYRITE. New Rosewarne Mine, Gwinear, Cornwall. Rich, bright, silvery mass composed of numerous sharp twinned crystals, ranging in size up to $\frac{1}{4}$ ", intergrown with massive Arsenopyrite. $3 \times 1\frac{3}{4} \times 1\frac{1}{2}$ ". £4.50.
8. ARSENOPYRITE. Penlee Quarry, Newlyn, Cornwall. Bright, silvery, sharp twinned crystals to 1 cm. in size, thickly intergrown and lining a $1\frac{1}{2} \times 1\frac{1}{4}$ " cavity in Quartz. $2\frac{1}{2} \times 1\frac{3}{4} \times 1\frac{1}{2}$ ". £4.50.
9. ATACAMITE. Remolinos, Atacama Desert, Chile. Bright green crystalline mass associated with a little reddish Hematite. $2 \times 1\frac{1}{4} \times 1$ ". £1.50.

10. AUGITE. Bancroft, Ontario, Canada. Large, well formed, slightly etched crystals to $1\frac{1}{4}$ " in size and of a greyish green colour, forming an intergrown mass on matrix. Some of the crystals show good terminations. $4\frac{1}{2} \times 2\frac{1}{2} \times 2$ ". £6.50.
11. AUSTINITE. Gold Hill, Toelle Co., Utah. Lustrous, well formed, very pale green sprays and aggregates of crystals richly scattered on ferruginous matrix. $2\frac{1}{2} \times 1\frac{1}{2} \times 1$ ". £4.50.
12. BARYTES. New Glencrieff Mine, Wanlockhead, Dumfries. Creamy white, sharp crystals to 1 cm. in size, scattered and aggregated on a matrix of lustrous intergrown pyramidal Quartz crystals. The specimen shows interesting shape and attractive form. $3\frac{1}{2} \times 3 \times 2$ ". £6.50.
13. BARYTES. Crowgarth Mine, Cleator Moor, Cumberland. Lustrous, zoned, pale bluish white crystal $\frac{3}{4}$ " in size, implanted on Dolomite matrix with odd smaller Barytes crystals and drusy Calcite crystals. $2\frac{1}{2} \times 1\frac{3}{4}$ ". £5.
14. BARYTOCALCITE. Admiralty Flats, Nentsberry Hags Mine, Nenthead, Cumberland. Select, creamy coloured, sprays and rosettes of spear shaped crystals, with a thin dusting of whitish Barytes, richly intergrown and scattered on Limestone with minor Calcite in association; the crystal sprays of Barytocalcite range in size up to $\frac{3}{4}$ ". $4 \times 3 \times 1\frac{1}{2}$ ". £11.
15. BARYTOCALCITE. Blegill Mine, Nr. Alston, Cumberland. Choice, transparent to translucent elongated terminated crystals to $\frac{1}{2}$ " in length thickly encrusting cellular matrix. $1\frac{1}{2} \times 1$ ". £1.75.
16. BEUDANTITE. Wheal Carpenter, Gwinear, Cornwall. Rich crusts of micro pale olive green crystals encrusting and lining joints and cavities in cellular Quartz Gossan. Very rich example of this mineral. $3 \times 2\frac{1}{2} \times 2$ ". £6.50.
17. BOULANGERITE. Stari-Trg Mine, Trepca, S. Serbia, Yugoslavia. Bright, silvery grey, needly crystals thickly encrusting and lining cavities in crystallised Calcite matrix with minor Quartz and Sphalerite in association. $3\frac{1}{2} \times 2 \times 1\frac{1}{2}$ ". £7.
18. BREWSTERITE. Whitesmith Mine, Strontian, Argyllshire. Choice, sharp, well formed glassy crystals, mostly around 4 mm. in size, thickly encrusting Calcite/Biotite Schist matrix. $2 \times 2 \times 1\frac{1}{2}$ ". £3.50.
19. BUSTAMITE. Zinc Corp. Mine, Broken Hill, N.S. Wales, Australia. Large, slightly rounded, salmony pink crystals to 1" in size, forming an intergrown mass and associated with a little Calcite, Sphalerite and reddish Spessartite Garnet. $2\frac{1}{2} \times 1\frac{1}{2} \times 1\frac{1}{2}$ ". £9.
20. CALCITE. Cromford, Nr. Matlock, Derbyshire. Specimen A - Choice, large, well formed translucent, doubly terminated scalenohedral crystals ranging in size up to 4" long attractively intergrown and associated with a little altered Limestone. Choice for display. $6\frac{1}{2} \times 5\frac{1}{2} \times 5$ " high. £23; Specimen B - Fine, very sharp, well formed scalenohedral and 'dog-tooth' habit crystals mostly around $\frac{3}{4}$ - 1" in length, thickly intergrown and encrusting all sides of a fragment of Limestone. $3\frac{1}{2} \times 2\frac{1}{2} \times 2\frac{1}{2}$ ". £14.50; Specimen C - A group of lustrous translucent scalenohedral crystals to $2\frac{1}{2}$ " in length, aggregated in parallel growth with very minor matrix attached. $3\frac{1}{2} \times 2 \times 1\frac{1}{2}$ ". £5.50. All the above specimens were collected early this century and are excellent for display - the crystals for the most part being of a light honey colour.

1. CARNOTITE. Rattlesnake Mine, Moab, San Juan Co., Utah. Very rich, bright yellow, thick crystalline crust covering Sandstone matrix. $3\frac{3}{4} \times 2\frac{1}{2}$ ". £11.
22. CARPHOLITE. Schlaggenwald, Bohemia, U.S.S.R. Choice, straw coloured, thick, fibrous radiated crystalline masses encrusting Greisen matrix. $2\frac{1}{2} \times 1\frac{1}{2} \times 1\frac{1}{2}$ ". £6.50.
23. CASSITERITE. Lady Gwendoline Mine, Germoe, Cornwall. Bright, blackish, well formed crystals to $\frac{1}{4}$ " in size, thickly intergrown and scattered on Chlorite/Chalcopyrite/Gilbertite veinstuff. $2\frac{1}{2} \times 2$ ". £5.50.
24. CASSITERITE. Poldice Mine, Gwennap, Cornwall. Small, bright, brownish black sharp crystals mostly around 2 - 3 mm. in size, richly scattered over cavernous Quartz/Tourmaline veinstuff. $2\frac{1}{2} \times 2 \times 1\frac{1}{2}$ ". £4.75.
25. CASSITERITE. Cligga Mine, Perranzabuloe, Cornwall. Select, well formed, large, blackish brown twinned single crystals, The crystals show good faces and have very minor Sericite mica attached. The crystals each approx. $\frac{3}{4} \times \frac{3}{4}$ " in size - £1.25 each.
26. CERUSSITE. Tsumeb, Otavi, S.W. Africa. Fine, sharp, glassy translucent twinned crystals to $\frac{1}{2}$ " in size, aggregated on their edges on cellular matrix with minor olive green micro crystals of Duftite. $2\frac{1}{2} \times 1\frac{1}{2}$ ". £6.50.
27. CERUSSITE. Pentire Glaze Mine, St. Minver, Cornwall. Rich, creamy white, elongated "Jack straw" type crystals thickly scattered and aggregated on ferruginous gossany Quartz. $2\frac{1}{2} \times 1\frac{1}{2} \times 1\frac{1}{2}$ ". £5.
28. CHALCEDONY. North Roskear Mine, Jamborne, Cornwall. Light coffee coloured translucent botryoidal and tubose mass partially frosted with drusy Quartz crystals on Dolomite/Chalcopyrite matrix. $2\frac{1}{2} \times 1\frac{1}{2}$ ". £2.50.
29. CHALCOPYRITE. Great Wheal Tolgus, Illogan, Cornwall. Bright, metallic, golden, complexly twinned platy crystals mostly around $\frac{1}{4}$ " in size, richly scattered over a crust of small brown Siderite crystals covering Quartzose veinstuff. Interesting and unusual form for this mineral the specimen being collected during the last century. $3\frac{1}{2} \times 3$ ". £9.
30. CHALCOPYRITE. Wheal Buller, Nr. Redruth, Cornwall. Bright, golden, twinned sphenoidal crystals to 5 mm. in size, richly scattered over a cellular Quartz/Chalcopyrite matrix. $2\frac{1}{2} \times 1\frac{1}{2} \times 1\frac{1}{2}$ ". £4.50.
31. CHILDRENITE. Drakewalls Mine, Gunnislake, Cornwall. Rich crust of sparkling micro coffee coloured crystals covering Tourmalinised Slate. Specimen A - $2\frac{1}{2} \times 2$ ". £3.50; Specimen B - 1×1 ". £1.25.
32. CHURCHITE. Nitzelbuch Mine, Auerbach, Bavaria, Germany. Snow-white, radiated, needle spherules aggregated on Limonitic matrix. 1×1 ". £5.50.
33. CONICHALCITE. Majuba Hill, Pershing Co. Nevada. Rich, apple green, botryoidal crusts covering Quartzose matrix with minor light green needle masses of MIXITE in association. $1\frac{1}{2} \times 1\frac{1}{2} \times 1$ ". £3.25.
34. NATIVE COPPER. Tolcarne Mine, Jamborne, Cornwall. Choice, coppery red cellular crystalline mass associated with minor fragments of Quartz. $3 \times 1\frac{1}{2} \times 1\frac{1}{2}$ ". £4.50.

35. NATIVE COPPER. Tiddys Cross-Course, United Mines, Gwennap, Cornwall. Choice, coppery crystalline plate with unusual ridges and parallel lines showing the bedding of the Slaty matrix in which the specimen formed, and with odd fragments of Quartz attached. $5\frac{1}{2} \times 4\frac{1}{2}$ ". £12.
36. CORUNDUM. Beitbridge, River Limpopo, Rhodesia. Well formed, complete, hexagonal crystal of a reddish brown colour. $1\frac{1}{2} \times 1$ " across the axis $\times \frac{3}{4}$ " in length. £2.25.
37. COSALITE. Cariboo Goldmine, Wells, British Columbia, Canada. Very rich, silvery grey, radiated and bladed masses thickly aggregated in white Quartz with odd small specks of Native Gold. $2 \times 1\frac{1}{2} \times 1\frac{1}{2}$ ". £11.
38. CRYOLITE. Ivigtut, Arksuk Fiord, Frederikshaab District, S. Greenland. Choice, transparent, well formed cubic crystals to $\frac{1}{4}$ " in size, thickly intergrown on massive Cryolite and with odd small well formed crystals of Pachnolite and Thomsenolite scattered on the crystals. $2 \times 2 \times 1\frac{1}{4}$ ". £13.
39. CUPRITE. Jarn Brea Mine, Illogan, Cornwall. Rich, bright maroon coloured cellular masses composed of well formed octahedral crystals and crystalline masses of Cuprite intergrown with a little Quartz and Native Copper. Specimen A - $2\frac{3}{4} \times 2 \times 2$ ". £8.75; Specimen B - $2\frac{1}{2} \times 2 \times 1\frac{1}{2}$ ". £7.00; Specimen C - $1\frac{1}{2} \times 1$ ". £1.75.
40. CUPRITE. Countybridge Quarry, Lizard, Cornwall. Select, deep red, thick massive vein section showing an interesting, almost dendritic, structure associated with a little Chrysocolla and Malachite between walls of dark Serpentine. $3\frac{1}{2} \times 2 \times 1\frac{1}{4}$ " thick. £4.50.
41. DATOLITE. Bergen Hill, New Jersey, U.S.A. Bright, transparent, sharp crystals to $\frac{1}{4}$ " in size, thickly intergrown and encrusting matrix with a large $1\frac{1}{4}$ " radiated mass of creamy white Pectolite implanted on the Datolite. $3 \times 1\frac{3}{4}$ ". £6.50.
42. DIOPHASE. Tsumeb, Otavi, S.W. Africa. Specimen A - Very choice, lustrous, bright emerald green sharp crystals, the largest being over $\frac{1}{2}$ " in size, thickly intergrown and lining a $2\frac{3}{4} \times 1\frac{1}{4}$ " cavity in massive Diopase/Calcite matrix with minor Cerussite in association. Superb specimen for display. $3\frac{3}{4} \times 2\frac{1}{2} \times 2$ ". £37; Specimen B - Choice, bright emerald green, sharp crystals to 1 cm. in size, thickly intergrown on a $1\frac{1}{4} \times 1$ " area on cellular Quartz/Calcite matrix with rich crusts and masses of light sky-blue PLANCHELITE in association. $2\frac{1}{2} \times 1\frac{1}{4} \times 1$ ". £13; Specimen C - Small, sparkling, bright emerald green crystals thickly scattered over and encrusting intergrown rhombic crystals of Calcite. $2 \times 1\frac{1}{2}$ ". £5.25.
43. DUFRENITE. Phoenix Mine, Linkinhorne, Cornwall. Rich, deep olive green, radiated circular masses to 1 cm. in diameter, encrusting Tourmaline/Quartz vein stuff. $3 \times 2\frac{1}{2} \times 2$ ". £5.
44. EPIDOTE. Monte Rosso, Val d'Aosta, Piedmont, Italy. Bright, transparent, yellowish green, sharp terminated crystals to 5 mm. in size, thickly scattered on matrix with odd small well formed crystals of Diopside in association. $2 \times 1\frac{1}{2}$ ". £4.50.
45. EUDIALYTE. Chibinz Tundra, Kola Pen., Russia. Rich, vitreous, raspberry red masses aggregated in Syenite matrix. $1\frac{1}{2} \times 1\frac{1}{4} \times 1$ ". £1.75.
46. FLUORITE. Caravia Mine, Asturias, Spain. Choice, light purple, translucent to transparent, sharp cubic crystal showing unusual etched bevelled edges implanted on fragment of matrix. $3 \times 2 \times 1\frac{1}{2}$ " - with the crystal being $1\frac{1}{2} \times 1\frac{1}{2} \times 1\frac{1}{4}$ " in size. £13.

47. GALENA. Herodsfoot Mine, Lanreath, Cornwall. Metallic grey well formed, modified cubic crystal with 1" faces implanted on a matrix of intergrown bright milky Quartz crystals. $3\frac{1}{2} \times 2$ ". £7.
48. GALENA. Blackdene Mine, Weardale, Co. Durham. Bright, silvery grey, sharp, modified cube-octahedral crystals to $\frac{3}{8}$ " in size, intergrown and scattered over small transparent cubic crystals of light purple Fluorite covering massive Fluorite matrix. $5\frac{1}{2} \times 5$ ". £14.
49. GARNET variety ALMANDINE. Zillertal, Austria. Fine, very large, sharp, deep brownish red crystals to 1" in size, scattered on and partially embedded in Chlorite Schist. There are over 10 large crystals on the specimen which is excellent for display. $7 \times 4 \times 2\frac{1}{2}$ ". £22.
50. GMELINITE. Megharamourne, Co. Antrim, N. Ireland. Sharp, well formed salmon pink crystals to 5 mm. in size, richly encrusting cellular Basalt matrix. $1\frac{1}{2} \times 1 \times 1$ ". £2.50.
51. GOETHITE. Botallack Mine, St. Just, Cornwall. Choice, pure, shining brownish black mass composed of numerous rounded botryoids and showing radiated structure where broken open. Attractive and interesting specimen from this classic location. $2\frac{1}{2} \times 2\frac{1}{2}$ ". £8.
52. GOETHITE. Wheal Owles, St. Just, Cornwall. Bright, greyish black well formed crystals thickly lining a $\frac{1}{2} \times \frac{1}{2}$ " cavity in Quartz/massive Goethite matrix. $1\frac{1}{2} \times 1\frac{1}{2}$ ". £2.50.
53. NATIVE GOLD. Kola Goldfield, Mysore, India. Thin, bright golden, scaly sheets and masses aggregated on and in a dark Quartz. $1\frac{1}{2} \times 1$ ". £3.25.
54. HEMATITE. Shallow Water Mine, Bodmin Moor, Cornwall. Lustrous, deep red, botryoidal mass thickly encrusting pale Amethystine Quartz. $3 \times 2\frac{1}{2}$ ". £1.50.
55. HEMATITE variety KIDNEY ORE. Hodbarrow Mine, Ulverstone, N. Lancs. Select, lustrous, blackish dome shaped botryoidal mass showing excellent form. This specimen was collected in the 1930's from this famous old mine. $4 \times 2\frac{1}{2} \times 3$ " high. £11.
56. HEMIMORPHITE. Mina Ojuela, Mapimi, Durango, Mexico. Very fine, bright, lustrous creamy white large sprays of sharp terminated crystals ranging in size up to $\frac{3}{8}$ " in length, thickly encrusting Limonitic matrix. $4 \times 2\frac{1}{2}$ ". £16.50.
57. HEMIMORPHITE. Mine Sa Duchessa, Domosnovas, Sardinia. Bright, sky blue, botryoidal crystalline mass covering and lining cavities in matrix. Very attractive specimen. $3\frac{1}{2} \times 2\frac{1}{2}$ ". £7.75.
58. LEADHILLITE. Leadhills, Lanarkshire, Scotland. Rich, pearly white platy masses intergrown with massive Cerussite and minor gossany matrix. Specimen A - $1\frac{1}{2} \times 1\frac{1}{2} \times 1\frac{1}{2}$ ". £3.50; Specimen B - $1\frac{1}{2} \times 1\frac{1}{2}$ ". £2.25.
59. LINARITE. Redgill Mine, Caldbeck, Cumberland. Bright blue, small, well formed, crystals richly lining cavities in Quartzose matrix with minor Cerussite in association. $1\frac{1}{2} \times 1$ ". £1.75.
60. MALACHITE. Roughtengill Mine, Caldbeck, Cumberland. Rich, bright green, radiated fibrous and 'wart' like masses thickly covering both sides of Gossany Quartz matrix. 3×2 ". £4.50.

61. MALACHITE. Copper Queen Mine, Bisbee, Cochise Co., Arizona, U.S.A. Choice, bright green, pure radiated, cavernous, crystallised mass with very minor areas of brownish Limonite. Extremely rich and colourful 'old time' specimen. $5\frac{1}{2} \times 3 \times 2$ ". £17.
62. MALAYAITE. Meldon, Devon. Very rich, waxy yellow masses thickly aggregated in Wollastonite hornfels. Bright fluorescence under short wave u.v. $2 \times 1\frac{1}{2}$ ". £3.50.
63. MIMETITE. Mexico Mine, Caldbeck, Cumberland. Bright, yellowish green, rounded barrel shaped crystals to 4 mm. in size, thickly aggregated on a $\frac{1}{2} \times \frac{1}{2}$ " area on Gossany Quartz. $2\frac{1}{2} \times 1\frac{1}{4} \times 1$ ". £3.
64. MIMETITE. Tsumeb, Otavi, S.W. Africa. Choice, lustrous, bright yellowish sprays of elongated spiky crystals, with individual sprays attaining $\frac{1}{2}$ " in size, thickly scattered over a matrix of crystallised Calcite with odd dendrites of Native Copper. The reverse of the specimen consists of large rhombic creamy Calcite crystals frosted over with light creamy yellow needly Mimetite crystals. $4\frac{1}{2} \times 2\frac{1}{2} \times 2$ ". £22.
65. MOLYBDENITE. Wolfram Camp, Queensland, Australia. Rich, bright, metallic lead grey sheaves of platy crystals, some showing hexagonal outlines and ranging in size up to 2" across, thickly aggregated in Quartz matrix. $4 \times 3 \times 2\frac{1}{2}$ ". £11.
66. MURDOCHITE. Mina Ojuela, Mapimi, Durango, Mexico. Sparkling, light brown, aggregates of micro crystals thickly scattered over cellular Limonitic matrix with small radiated masses of turquoise blue Aurichalcite in association. $2\frac{1}{2} \times 2$ ". £7.
67. NEPTUNITE. Gem Mine, San Benito Co., California, U.S.A. Fine, bright, reddish black, sharp elongated terminated crystals to $\frac{1}{2}$ " in length richly intergrown and scattered on Serpentine matrix with a small well formed light brown Joaquinite crystal associated. $2 \times 1\frac{1}{2} \times 1\frac{1}{4}$ ". £17.
68. OLIVENITE. Wheel Gorland, St. Day, Cornwall. Large, bright olive green, sharp terminated stubby crystals to 4 mm. in size, scattered in cavities in cellular leached granitic matrix. $3 \times 2\frac{1}{2}$ ". £5.50.
69. ORTHOCLASE. Longdowns, Carnmenellis, Cornwall. A large, well formed and terminated light salmon coloured crystal approx. $\frac{3}{4} \times \frac{3}{4} \times \frac{3}{4}$ " long protruding from Pegmatite matrix with minor creamy white Albite and Quartz in association. $2 \times 2 \times 1\frac{1}{2}$ ". £2.50.
70. PHLOGOPITE. Wilberforce, Ontario, Canada. A sharp, hexagonal, light brown, lustrous crystal book $\frac{3}{4} \times \frac{3}{4}$ " in size implanted on a block of cleaved creamy white rhombic Calcite. $1\frac{1}{2} \times 1\frac{1}{2} \times 1\frac{1}{4}$ ". £3.25.
71. PREHNITE. Paterson, New Jersey, U.S.A. Choice, pale lime green, doubly terminated well formed crystal aggregates, mostly around $\frac{1}{4}$ " in size, scattered over Basalt matrix. $2\frac{1}{4} \times 2\frac{1}{4}$ ". £3.50.
72. PURPURITE. Karibab, S.W. Africa. Pure, brownish black mass with lavender coloured surfaces. $1\frac{1}{2} \times 1\frac{1}{4}$ ". £1.25.
73. PYRITES. Mina Noche Buena, Zacatecas, Mexico. Choice, very bright, striated modified cubic crystals, mostly around 5 mm. in size, thickly encrusting matrix with minor creamy Dolomite, brownish Sphalerite, Galena and Chalcopyrite in association. $4 \times 2\frac{1}{2}$ ". £8.

- PYRITES. Wheal Mary Ann, Menheniot, Cornwall. Select, bright, golden modified cube-octahedral crystals richly intergrown and scattered on milky white pyramidal Quartz crystals. Specimen A - $3 \times 2 \times 1\frac{1}{2}$ ". £7; Specimen B - $1\frac{1}{2} \times 1\frac{1}{2} \times 1\frac{1}{2}$ ". £3.25.
75. PYROMORPHITE. Wheal Goat, Brittany, France. Pure, lustrous, light brown sprays of elongated crystals forming a cellular intergrown mass. Very rich specimen from this classic old location. $2 \times 2 \times 1\frac{1}{2}$ ". £11.
76. PYROMORPHITE. Leadhills, Lanarkshire, Scotland. Light green, well formed, small hexagonal crystals richly scattered over Quartzose veinstuff. $1\frac{1}{2} \times 1\frac{1}{2}$ ". £1.25.
77. QUARTZ. Florence Mine, Egremont, Cumberland. Specimen A - Lustrous, transparent to translucent, sharp, doubly terminated, smoky crystals to 1" in size, intergrown on matrix with minor Specularite and Calcite in association. $2 \times 1\frac{1}{2} \times 1\frac{1}{2}$ ". £4.50; Specimen B - Select, large, sharp transparent to translucent single smoky crystals showing excellent faces, some have minor Specularite attached. Crystals each approx. $1\frac{1}{2} \times 1\frac{1}{2} \times 1$ " in size. £1.25 each.
78. QUARTZ. Groverake Mine, Nr. Rookhope, Co. Durham. Choice, very bright, large sharp translucent, perfectly formed pyramidal milky crystals to $1\frac{1}{2}$ " in size, thickly intergrown on massive Quartz. Excellent specimens for display. Specimen A - $7 \times 6\frac{1}{2}$ ". £14; Specimen B - 6×5 ". £8.
79. RHODONITE. Franklin, Sussex Co., New Jersey, U.S.A. Rich, bright pink, slightly rounded large crystals and crystal masses, thickly intergrown with a little Calcite and blackish Franklinite. $2\frac{1}{2} \times 1\frac{1}{2}$ ". £9.
80. SAMIRESITE (Plumbian Betafite). Williamsons Prospect, Nr. Yinnietarra, W. Australia. Pure, vitreous, light brown, masses with very minor matrix attached. Specimens approx. 1×1 ". £1.25 each.
81. SIDERITE. Herodsfoot Mine, Lanreath, Cornwall. Choice, light, brown large lenticular crystals attractively intergrown and encrusting Quartz matrix. The Siderite is, itself, partially covered with a crust of small creamy white Dolomite crystals on which are implanted odd bright, dark brown, crystals of Sphalerite to 1 cm. in size. $3\frac{1}{2} \times 2\frac{1}{2} \times 1\frac{1}{2}$ ". £7.50.
82. NATIVE SILVER. Cobalt, Ontario, Canada. Very fine, bright, silvery thick sheet like mass with odd adhering fragments of Calcite and an attractive iridescence in places. $4 \times 1\frac{1}{2}$ " and ranging from $\frac{1}{2}$ " - $\frac{3}{4}$ " thick. £23.
83. NATIVE SILVER. Minnesota Mine, Keweenaw Pen., Michigan, U.S.A. Pure, bright, silvery hackly mass with odd small fragments of adhering Quartz. $1\frac{1}{2} \times 1$ ". £5.
84. SMITHSONITE. Tsumeb, Otavi, S.W. Africa. Bright, light honey coloured, sharp rhombic crystals to 1 cm. in size, thickly intergrown and completely encrusting matrix. Specimen A - $4\frac{1}{2} \times 3\frac{1}{2} \times 2$ ". £14.25; Specimen B - with traces of bluish Linarite - $3 \times 2\frac{1}{2} \times 1\frac{1}{2}$ ". £7.75.
85. SPHALERITE. Coalclough Mine, Nr. Nenthead, Cumberland. Lustrous, bright black, sharp crystals to $\frac{1}{2}$ " in size, richly scattered over a drusy crust of Quartz crystals showing cubic casts of a mineral which has since been leached away. $3\frac{1}{2} \times 2\frac{1}{2} \times 1\frac{1}{2}$ ". £6.50.
86. SPHALERITE variety SCHALENBLENDE. Příbram, Bohemia, U.S.S.R. Choice, light brown, very well banded mass with odd threads of metallic Galena. Very good example of this unusual variety. $2\frac{1}{2} \times 2$ ". £4.50.

87. STANNITE. East Pool Mine, Illogan, Cornwall. Rich, metallic, slightly tarnished mass intergrown with bright black bladed masses of Wolframite, golden Chalcopyrite and a little Quartz and Fluorite. $2\frac{1}{2} \times 2\frac{1}{2} \times 1\frac{1}{2}$ ". £5.
88. STILBITE. The Storr, Isle of Skye, Scotland. Lustrous, creamy white, well formed terminated crystals, mostly around 1 cm. in size thickly intergrown and encrusting matrix. $3\frac{1}{2} \times 2\frac{1}{2}$ ". £3.50.
89. METALLIC TIN. Mellanear Smelting Works, Hayle, Cornwall. An interesting silvery metallic convoluted mass of smelted tin taken from the Smelting works during the last century. $5\frac{1}{2}$ " long x $1\frac{1}{4} \times 1$ ". £7.
90. TOURMALINE. Karibab, S.W. Africa. Lustrous, deep green, columnar crystal mass of varying colours partially embedded in milky Quartz. $3\frac{1}{2} \times 2\frac{1}{2} \times 1\frac{1}{2}$ ". £3.50.
91. TOURMALINE variety DRAVITE. Yinnietharra, W. Australia. Bright, dark brown, well formed doubly terminated crystals to $\frac{1}{2}$ " in size, scattered and partially embedded in Muscovite Mica Schist. $3 \times 2 \times 1\frac{1}{2}$ ". £4.50.
92. URANOCIRCITE. Bergen, Nr. Folkenstein, Saxony, Germany. Bright, light yellowish green, platy crystals scattered on and in crystalised smoky Quartz matrix. $2 \times 1\frac{1}{2} \times 1\frac{1}{4}$ ". £6.50.
93. VESUVIANITE variety GENEVITE. Carriere Dalmar, Sidi Bou Othmane, Morocco. Lustrous, light brown, bladed striated crystals and crystal sections intergrown with and partially embedded in Quartzose matrix. $2\frac{1}{2} \times 1\frac{3}{4}$ ". £3.
94. WAVELLITE. High Down Quarry, Filleigh, Devon. Rich, creamy coloured, fibrous radiated masses and spherules encrusting both sides of a dark slate matrix. $1\frac{1}{2} \times 1\frac{1}{2}$ ". £1.25.
95. WILLEMITE. Franklin, Sussex Co., New Jersey, U.S.A. Superb, rich, light lime green coloured granular mass associated with much black Franklinite and a large area of white Calcite, and a little reddish Zincite. Brilliant green/red fluorescence under u.v. light, and an unusually rich specimen. $4 \times 2\frac{1}{2} \times 2\frac{1}{2}$ ". £9.
96. WITTICHENITE. Daniel Mine, Wittichen, Schwartzwald, Germany. Rich, slightly tarnished, metallic, bladed crystals and masses thickly aggregated in Calcite/Barytes matrix with minor Emplectite in association. $3\frac{1}{2} \times 2$ ". £11.
97. WOLFRAMITE. Quick's Shaft, Poldice Mine, Gwennap, Cornwall. Rich, black, bladed mass associated with minor creamy Fluorite. $2 \times 1\frac{1}{2} \times 1$ ". £1.25.
98. WULFENITE. Tsumeb, Otavi, S.W. Africa. Superb, sharp, well formed bladed crystals of a light brownish colour, with most of the crystals being around $\frac{1}{2}$ " in size, thickly encrusting both sides of matrix. The crystals are, for the most part, free standing and one side of the specimen has a slight dusting of micro Duftite crystals. $4\frac{1}{2} \times 3\frac{1}{4}$ ". £23.
99. WULFENITE. Los Lamentos, Chihuahua, Mexico. Bright, burnt-orangey coloured tabular crystals ranging in size up to 1 cm. thickly intergrown and encrusting Dolomite matrix. $4 \times 2\frac{1}{2}$ ". £8.
