Tel.No.: St. Just 660
(STD 073 677)

V.A.T. No.: 132-7852-67

ORDERING INFORMATION

Mail orders are promptly filled and despatched on a 7-day examination basis, subject to approval. Immediate refund guaranteed on return of specimen(s), in good condition.

Please quote the name and number of the specimen(s) required, and enclose P.O./Cheque with order. All prices are inclusive of V.A.T.

No charge is made for postage and packing, except for overseas customers and postage over 75p.

We reserve the right to make slight substitutions, if necessary, unless advised to the contrary.

Special requests and "wants lists" are welcome.

We hope that we may be of some service to you, and assure you of our best attention at all times.

NOVEMBER 1975

1. ANAPAITÉ. Bellaver de Cerdana, Gerona, Spain. Bright sparkling small, very sharp, transparent olive green crystals thickly lining a $1\frac{1}{2} \times 1\frac{1}{2}$ " cavity in Mudstone matrix. $3\frac{1}{2} \times 2\frac{1}{2} \times 1\frac{1}{2}$ ". £7.
2. ANATASE. Tysse, Norway. Very sharp, lustrous, bluish black crystals to 5 mm. in size, scattered on sides of a group of intergrown clear well terminated Quartz crystals to 1" in length - intergrown and protruding from massive Quartz. These crystals are unusually large for Anatase. $2 \times 2 \times 1\frac{1}{2}$ ". £17.
3. APATITE variety FRANCOLITE. Fowey Consols Mine, Tywardreath, Cornwall. Specimen A - Lustrous, creamy transparent hexagonal crystals, mostly around 3 mm. in size, thickly intergrown and covering a $3 \times 1\frac{1}{2}$ " area on Quartz/Slate veinstuff. $4\frac{1}{2} \times 2\frac{1}{2}$ ". £7.75; Specimen B - Bright, translucent colourless crystals thickly intergrown and aggregated in clusters, lining large cavities in Quartz veinstuff with minor light brown Siderite crystals in association. $2\frac{1}{2} \times 2 \times 1\frac{1}{2}$ ". £4.50; Specimen C - Sharp, translucent colourless crystals to 3 mm. in size, thickly lining a 1x1" cavity in Quartz. $1\frac{1}{2} \times 1\frac{1}{2} \times 1$ ". £2.50.
4. APOPHYLLITE. Jewel Tunnel, Poona, India. A portion of a large transparent to translucent lustrous, pale lime green coloured crystal, showing some good faces, and approx. 2" on edge associated and intergrown with sheaves of radiated creamy pink STILBITE. $2\frac{1}{2} \times 2 \times 1\frac{1}{2}$ ". £5.50.
5. ARSENOPYRITE. Parrall, Chihuahua, Mexico. Specimen A - Large, bright, sharp silvery crystals, some being doubly terminated, to $\frac{1}{2}$ " in size forming an intergrown crystal mass with odd small Quartz crystals in association. $2\frac{1}{2} \times 2 \times 1\frac{1}{2}$ ". £8.50; Specimen B - Very large bright silvery crystals to $\frac{3}{4}$ " in size, thickly intergrown on massive Arsenopyrite. $2\frac{1}{2} \times 2 \times 1\frac{1}{4}$ ". £5.50; Specimen C - Bright silvery, very sharp, elongated crystals mostly around 5 mm. in length, thickly intergrown on massive Arsenopyrite. $2\frac{1}{2} \times 1\frac{1}{2} \times 1$ ". £4.50.

6. ATACAMITE. Duke of Cornwall Mine, Kadina, S. Australia. Specimen A - Bright, sparkling, small sharp emerald green crystals thickly lining cavities in Gossan matrix. $2\frac{1}{2} \times 1\frac{1}{2} \times 1\frac{1}{2}$ ". £3.25; Specimen B - As Specimen A - with the crystals encrusting matrix. $2\frac{1}{2} \times 1\frac{1}{2}$ ". £2.25; Specimen C - Small, bright, sharp emerald green crystals thickly lining a $1\frac{1}{2} \times 1\frac{1}{2}$ " cavity in matrix with minor Quartz in association. $2 \times 1\frac{1}{2} \times 1$ ". £2.
7. AXINITE. Botallack Head, St. Just, Cornwall. Specimen A - Choice, lustrous, clove brown sharp well formed crystals to 8 mm. in size, thickly intergrown on massive Axinite matrix. $3 \times 1\frac{1}{2}$ ". £9; Specimen B - Very bright translucent sharp clove brown crystals to 5 mm. in size, thickly lining a $1\frac{1}{2} \times 1\frac{1}{2}$ " cavity in massive Axinite with odd smaller cavities also lined with crystals. $3\frac{1}{2} \times 2\frac{1}{2}$ ". £8; Specimen C - Choice, lustrous, sharp clove brown crystals to 7 mm. in size, thickly intergrown and covering massive Axinite. $1\frac{1}{2} \times 1$ ". £5.50.
8. AZURITE. Bisbee, Cochise Co., Arizona, U.S.A. Bright blue aggregates of well formed crystals to 5 mm. in size, thickly intergrown on cellular Limonitic matrix and associated with small botryoidal masses of Malachite, some showing octahedral form replacing small cuprite crystals. $1\frac{1}{2} \times 1\frac{1}{2}$ ". £5.
9. BARYTES. Ladywash Mine, Eyan, Derbyshire. Lustrous, creamy white bladed 'cocks-comb' crystals to 1" in size, forming an attractive intergrown mass with a faint dusting of drusy brassy Marcasite crystals. $2\frac{1}{2} \times 2\frac{1}{2}$ ". £1.75.
10. BARYTOCALCITE. Blagill Mine, Nr. Alston, Cumberland. Choice, creamy coloured, sharp elongated terminated crystals to 1 cm. in length, thickly lining a $2\frac{1}{2} \times 1\frac{1}{2}$ " cavity in massive Barytocalcite. The cavity extends around one side of the specimen and is also lined with crystals on a $2\frac{1}{2} \times 1\frac{1}{2}$ " area on the reverse. 4×3 ". £9.75.
11. BERTRANDITE. Cheesewring Qry. Linkinhorne, Cornwall. Small, lustrous, translucent colourless platy crystals to 4 mm. in size, scattered amongst small Quartz crystals on a 1x1" area on Pegmatitic Granite. $2\frac{1}{2} \times 1\frac{1}{2} \times 1\frac{1}{2}$ ". £4.50.
12. BEUDANTITE. Wheel Carpenter, Gwinear, Cornwall. Rich crust of sparkling dark olive green micro crystals on Gossan Quartz. $2\frac{1}{2} \times 1 \times 1$ ". £2.75.
13. NATIVE BISMUTH. Cobalt, Ontario, Canada. Pure, bright, silvery metallic crystalline cleavage mass with very minor Calcite attached. $1\frac{1}{2} \times 1\frac{1}{2} \times 1\frac{1}{2}$ ". £8.
14. CALCITE. Stank Mine, Ulverston, N. Lancs. Lustrous, transparent to translucent milky coloured well formed terminated crystals, mostly around 1 cm. in length, with a few slightly larger, thickly intergrown and completely encrusting Limonite matrix. $4 \times 2\frac{1}{2}$ ". £4.50.
15. CARMINITE. Mina San Felix, Caborca, Sonora, Mexico. Dark, carmine red crystalline masses and veinlets intergrown with Quartz and minor light yellowish earthy Beudantite. There are numerous small cavities lined with micro carminite crystals. Very rich example of this rare mineral. $2 \times 1\frac{1}{2} \times 1\frac{1}{2}$ ". £5.50.
16. CASSITERITE. North Pig Lode, 700' level, Geevor Mine, Pendeen, Cornwall. Very rich, light brown cellular mass with numerous cavities lined with sparkling micro crystals. The specimen was collected in 1931 from one of the richest lodes in the mine. $3 \times 2 \times 2$ ". £3.50.

17. CERARGYRITE. variety EMBOMITE. Broken Hill, N.S.Wales, Australia. Pure, light olive green, cellular waxy crystallised mass. Specimen A - With minor Garnet in association. $1\frac{1}{2} \times 1\frac{1}{2}$ ". £7; Specimen B - $1\frac{1}{2} \times 1\frac{1}{2}$ ". £2.75.
18. CERUSSITE. Mibladen, Nr. Midelt, Atlas Mts., Morocco. An unusual translucent creamy coloured well formed, doubly terminated, crystal 1×1 " in size, implanted on the end of a matrix of intergrown platy pink Barytes crystals with odd small masses of Galena in association. $2\frac{1}{2} \times 1\frac{1}{2} \times 1$ ". £5.50.
19. CERUSSITE. Dundas, Tasmania, Australia. Lustrous, translucent, whitish bladed crystals to $\frac{1}{2}$ " in length, thickly intergrown on Linonite. $2 \times 1\frac{1}{2}$ ". £3.25.
20. CHALCOCITE. Cooks Kitchen Mine, Camborne, Cornwall. Dark grey, platy hexagonal crystals to $\frac{1}{4}$ " in size, intergrown and scattered on cellular Quartz/Hematite veinstuff. $2\frac{1}{2} \times 2\frac{1}{2}$ ". £7.
21. CHALCOCITE. Wethered Lode, Geevor Mine, Pendeen, Cornwall. Small, sharp, metallic grey crystals to 3 mm. in size, intergrown and scattered on tarnished Chalcopyrite/Quartz veinstuff. $2\frac{1}{2} \times 1\frac{1}{2}$ ". £6.
22. CHALCOPYRITE. Treece, Cherokee Co., Kansas, U.S.A. Bright, golden, sharp sphenoidal crystals, mostly around 4 mm. in size, and some having an attractive iridescent tarnish, thickly scattered over creamy pink saddle shaped crystals of Dolomite covering chert matrix. $4\frac{1}{2} \times 3\frac{1}{2} \times 2$ ". £14.
23. CHALCOPYRITE. Fowey Consols Mine, Tywardreath, Cornwall. Bright golden metallic twinned crystals to 1 cm. in size, intergrown with slender Quartz crystals on a $1\frac{1}{2} \times 1$ " area on Quartz/Chlorite veinstuff with minor lenticular Siderite in association. 2×2 ". £4.50.
24. CHALCOPYRITE. Gt. Ormes Head Mine, Carnarvonshire, N. Wales. Golden metallic twinned crystals to 4 mm. in size scattered on creamy coloured Dolomite crystals lining cavities in massive Dolomite matrix. Specimens from this old occurrence are now rare. $3 \times 2 \times 2$ ". £4.50.
25. CLINOCLASE. Wheal Gorland, St. Day, Cornwall. Specimen A - Very bright, lustrous, deep blue crystals and 'acorns' ranging in size to 5 mm. thickly encrusting a 1×1 " area on cellular Quartz matrix with a $\frac{3}{4}$ " cavity and other smaller cavities lined with bright, small, sharp OLIVENITE crystals. $2\frac{1}{2} \times 2\frac{1}{2}$ ". £14; Specimen B - Very bright, deep blue, crystals and crystal aggregates mostly around 3 mm. in size, thickly lining a $\frac{1}{2}$ " cavity in cellular Quartz with odd smaller cavities lined with small Olivenite and Clinoclase crystals. $2\frac{1}{2} \times 1\frac{1}{2} \times 1\frac{1}{2}$ ". £6.50; Specimen C - Two 1 cm. sized cavities in cellular Quartz thickly lined with bright deep blue crystals ranging in size to 3 mm. There are odd traces of Olivenite in places. $1\frac{1}{2} \times 1$ ". £4.50.
26. COBALITE. Hakansbo, Vastmanland, Sweden. A sharp lustrous tin-white crystal 4 mm in size partially embedded in massive brassy Pyrrhotite. $1\frac{1}{2} \times 1\frac{1}{2} \times 1$ ". £2.25.
27. NATIVE COPPER. Unity Lode, Levant Mine, Pendeen, Cornwall. Tarnished metallic coppery coloured sheet covering altered Slate matrix. $2\frac{1}{2} \times 1\frac{1}{2} \times 1$ ". £1.75.
28. CORNETITE. Mine de l'Etoile, Lubumbashi, Katanga, Zaire. Choice, rich, light blue flattened crystals and crystal masses to $\frac{1}{4}$ " in size, scattered over two sides of matrix. Rich example of this rare copper mineral. $4 \times 2 \times 1\frac{1}{2}$ ". £14.

29. CUPRITE. Wheal Gorland, St. Day, Cornwall. Choice, very rich, mass of lustrous deep maroon coloured sharp octahedral crystals to 4 mm. in size, associated with much metallic bright crystallised and crystalline NATIVE COPPER, and odd small fragments of vein Quartz. The specimen was collected in the early part of last century. $4 \times 2\frac{1}{2} \times 2$ ". £18.
30. CUPRITE. Copper Queen Mine, Bisbee, Cochise Co., Arizona, U.S.A. Pure rich deep red mass, with minor green Chrysocolia and black Tenorite in association. $2\frac{1}{2} \times 1\frac{1}{2}$ ". £1.50.
31. DOLOMITE. Treece, Kansas, U.S.A. Lustrous, bright pink, curved saddle shaped crystals thickly intergrown and encrusting matrix. $2\frac{1}{2} \times 2$ ". £3.25.
32. ERYTHRITE. Saalfeld, Thuringia, Germany. Rich, deep pink, crusts and small areas of bright needly crystals on Barytes rich matrix. $2\frac{1}{2} \times 1\frac{1}{2} \times 1\frac{1}{4}$ ". £4.50.
33. FLUORITE. Heights Mine, Weardale, Co. Durham. Fine, transparent emerald green coloured sharp well formed cubic crystals, to $\frac{1}{2}$ " in face edge, thickly intergrown and encrusting a light coloured matrix. $4 \times 2\frac{1}{2} \times 1\frac{1}{2}$ ". £28.
34. FLUORITE. South Wheal Tamar, Bere Alston, Devon. Sharp, pale creamy green OCTAHEDRAL CRYSTALS to 1 cm. in size thickly intergrown and encrusting Chalcedonic Quartz. $4 \times 2\frac{1}{2}$ ". £6.50.
35. FLUORITE. Hilton Mine, Scordale, Westmoreland. Bright, transparent, yellow sharp cubic crystals to $\frac{1}{2}$ " on face edge thickly intergrown and encrusting matrix. $3 \times 2\frac{1}{2}$ ". £7.
36. FLUORITE. Boltsburn Mine, Rookhope, Co. Durham. A large translucent to transparent, light purple inter-penetrant twinned cubic crystal, the larger being $3 \times 2\frac{1}{2} \times 2\frac{1}{2}$ " in size, the smaller being $1\frac{1}{2} \times 1\frac{1}{2} \times 1\frac{1}{2}$ " in size, with bright doubly terminated crystals of milky Quartz to 1 cm. in size, and a little brown Siderite encrusting two faces of the larger crystal. £11.
37. FRANKLINITE. Franklin, Sussex Co., New Jersey, U.S.A. Specimen A - Pure black lustrous mass, with one good crystal face and minor Calcite in association. $2 \times 1\frac{1}{2} \times 1$ ". £2.25; Specimen B - Well formed, lustrous black, single octahedral crystals, each showing several good faces but none being absolutely complete. Varying in size from $\frac{1}{2} \times \frac{3}{4} \times \frac{1}{2}$ " - $1 \times \frac{3}{4} \times \frac{1}{2}$ ". £2.25 - £4.50 each.
38. GALENA. Mid-Continent Mine, Treece, Kansas, U.S.A. Bright, metallic grey, sharp cubic crystals to 1 cm. on face edge, scattered over both sides of an intergrown mass of light, reddish brown, Sphalerite crystals, showing much parallel growth, to 1" in size. There are numerous bright golden small sharp Chalcopyrite crystals encrusting the faces of some of the Sphalerite crystals. 3×2 ". £7.
39. GALENA. Greenside Mine, Glenridding, Westmoreland. Lustrous metallic grey modified cube-octahedral crystals to 1 cm. in size, forming a pure intergrown mass with a 1" area of platy Calcite crystals in association. $2\frac{1}{2} \times 1\frac{1}{2} \times 1$ ". £4.50.
40. GALENA. Eyan, Derbyshire. Sharp, lead grey, octahedral crystals to $\frac{1}{2}$ " on face edge, forming a pure intergrown mass with very minor small transparent cubes of Fluorite and elongated translucent creamy coloured small crystals of Calcite scattered on one side of the specimen. $3 \times 1\frac{1}{2}$ ". £8.

41. GEOCRONITE. Sala, Orebro, Sweden. Very rich, metallic silvery grey mass associated with minor Calcite matrix. $2\frac{1}{2} \times 1\frac{1}{4} \times 1\frac{1}{2}$ ". £6.50.
42. GOETHITE variety "Wood Iron Ore". Restormel Royal Iron Mine, Lostwithiel, Cornwall. Choice, pure, light brown radiated banded mass with different bands showing varying shades of colour. $2\frac{1}{2} \times 2\frac{1}{2} \times 2$ ". £5.50.
43. GOETHITE. Wheal Castle, St. Just, Cornwall. Radiated, deep brown banded mass, with a bright shining blackish botryoidal surface, thickly lining large cavities in cellular Quartz. $1\frac{1}{2} \times 1\frac{1}{2} \times 1\frac{1}{2}$ ". £2.25.
44. HAUSMANNITE. Wyncham Mine, Egremont, Cumberland. Small, lustrous lustrous black crystals thickly intergrown on cellular massive Hausmannite. $2 \times 1\frac{1}{2}$ ". £4.50.
45. HEMATITE. Parknoweth Mine, Nr. St. Just, Cornwall. Lustrous, deep blackish red thick radiated botryoidal mass covering Quartz veinstuff. $3\frac{1}{2} \times 2 \times 1\frac{1}{2}$ ". £2.75.
46. HEMATITE. Rio Marina, Isle of Elba, Italy. Very choice, bright black, sharp well formed crystals to $\frac{3}{4}$ " in size, and with a faint attractive irridescent tarnish, thickly intergrown and covering massive Hematite matrix. $5 \times 3\frac{1}{4}$ ". £17.
47. HEMIMORPHITE. Mina Ojuela, Mapimi, Durango, Mexico. Fine, lustrous creamy white, large sharp terminated crystals to $\frac{3}{4}$ " in length, thickly intergrown and free standing on cellular Limonite matrix. $3\frac{1}{2} \times 2$ ". £9.
48. HEMIMORPHITE. La Esmeralda Mine, Durango, Mexico. Specimen A - Select, silky turquoise blue coloured thick botryoidal mass covering Barytes matrix. $3\frac{1}{2} \times 2 \times 2$ ". £8; Specimen B - As Specimen A - but with the colour being a slightly paler blue. $3\frac{1}{2} \times 2$ ". £6.50. Very attractive and colourful specimens.
49. HYDROCERUSSITE. Mendip Hills, Somerset. Rich, pearly white translucent bladed crystal mass 1" in size, partially embedded in greyish Pyrolusite matrix, with another $\frac{3}{4}$ " sized bladed Hydrocerussite crystal mass on the reverse of the specimen. $3\frac{1}{2} \times 2\frac{1}{4} \times 1\frac{1}{2}$ ". £8.
50. IDOCRASE (Vesuvianite). Ala Valley, Piedmont, Italy. Specimen A - Very bright sharp terminated dark olive brown crystals to 5 mm. in size, thickly intergrown and covering matrix. 1×1 ". £6.50; Specimen B - As Specimen A - but with the crystals ranging up to 7 mm. in size. $1 \times \frac{3}{4}$ ". £6.50.
51. IODYRITE. Broken Hill, N.S. Wales, Australia. Specimen A - Choice rich, pale yellowish crystals and crystal masses to 4 mm. in size, richly aggregated and scattered on Limonitic gossan, with blackish Psilomelane and odd small crystalline masses of Azurite in association. $3 \times 2\frac{1}{2}$ ". £14; Specimen B - Small, lustrous yellowish crystal masses scattered on Limonitic gossan. $1\frac{1}{2} \times 1\frac{1}{2}$ ". £3.50.
52. LIBETHENITE. Phoenix Mine, Linkinhorne, Cornwall. Lustrous, deep olive green well formed crystals to 3 mm. in size, richly scattered on and in cavities in cellular Quartz with minor reddish Hematite. $1\frac{3}{4} \times 1\frac{1}{2} \times 1$ ". £3.50.
53. LISKEARDITE. Marke Valley Mine, Linkinhorne, Cornwall. Snow-white, thick, crystalline crust covering Quartz/Chalcopyrite veinstuff. Rich specimen from the type location for this mineral. $1\frac{1}{2} \times 1\frac{1}{2} \times 1$ ". £2.25.

54. MAGNETITE. Traversella, Piedmont, Italy. Choice, lustrous black, sharp modified crystals to 1 cm. in size, richly intergrown on massive Magnetite matrix. $3\frac{1}{2} \times 2\frac{1}{2}$ ". £12.
55. MARCASITE. Tincroft Mine, Illogan, Cornwall. Specimen A - Bright, metallic, sharp twinned bladed golden crystals to 5 mm. in size, thickly intergrown and covering massive Marcasite. $2\frac{1}{2} \times 2\frac{1}{4}$ ". £5; Specimen B - As Specimen A - with the crystals encrusting Quartz. $1\frac{1}{2} \times 1\frac{1}{4}$ ". £2.25.
56. META-CINNABAR. New Almaden, Santa Clara Co., California, U.S.A. Fine, lustrous black, well formed crystals to 3 mm. in size, intergrown and encrusting a Quartzose matrix. The crystals are unusually large for this mineral. $3\frac{1}{2} \times 2\frac{1}{2} \times 2$ ". £14.
57. META-ZEUNERITE. Wheal Edward, St. Just, Cornwall. Lustrous, small, light green platy crystals thickly encrusting slightly iron-stained pyramidal Quartz crystals. 1×1 ". £1.50.
58. MIMETITE variety CAMPYLITE. Drygill Mine, Caldbeck, Cumberland. Specimen A - Select, unusual, bright yellowish orange barrel shaped crystals to 8 mm. in size, showing overgrowths of small hexagonal Mimetite crystals, richly intergrown and lining a $2 \times 1\frac{1}{2}$ " cavity in Quartz veinstuff. $4 \times 2\frac{1}{2}$ ". £7; Specimen B - Lustrous, light orangey, sharp barrel shaped crystals to 4 mm. in size, thickly intergrown and encrusting Quartz. $2\frac{1}{2} \times 1\frac{1}{2}$ ". £3.25; Specimen C - Lustrous, light orangey, barrel shaped crystals forming a pure intergrown mass and partially overlain with a thin yellowish crust of crystalline Mimetite. $2 \times 1\frac{1}{2}$ ". £2.25.
59. MIMETITE. Tsumeb, Otavi, S.W. Africa. Lustrous, translucent, light yellowish sharp elongated spiky crystals to 4 mm. in length richly intergrown and scattered over both sides of matrix. $1\frac{1}{2} \times 1\frac{1}{2}$ ". £6.50.
60. OMPHACITE. Quincinetto, Piedmont, Italy. Bright, dark greenish, sharp, terminated crystals to 5 mm. in size, thickly intergrown in a $1\frac{1}{2} \times \frac{1}{2}$ " cavity in matrix, with odd lustrous, well formed creamy brown Titanite crystals in association. 2×2 ". £6.50.
61. OLIVENITE. Wheal Gorland, St. Day, Cornwall. Rich, sparkling, small, very sharp, olive green crystals thickly lining cavities in cellular Quartz gossan matrix. Specimen A - $4 \times 2\frac{1}{2} \times 2$ ". £5.50; Specimen B - 3×2 ". £3.50; Specimen C - $1\frac{1}{2} \times 1\frac{1}{2} \times 1\frac{1}{2}$ ". £2.25.
62. OLIVENITE. Wheal Unity, Gwennap, Cornwall. Choice, light olive green radiated needle crystals, resembling velvet in appearance, thickly lining a $\frac{3}{4}$ " cavity in Quartz gossan. $1\frac{1}{2} \times 1$ ". £3.25.
63. PHARMACOSIDERITE. Wheal Gorland, St. Day, Cornwall. Bright, light green small sharp, cubic crystals richly lining cavities in Quartzose gossan. Specimen A - $2 \times 1\frac{1}{2} \times 1$ ". £3.25; Specimen B - $1\frac{1}{2} \times 1\frac{1}{2} \times 1$ ". £2.50.
64. PHOSPHURANYLITE. Wheal Edward, St. Just, Cornwall. Rich, light yellow crusts covering two sides of altered Slate matrix. $2\frac{1}{2} \times 1\frac{1}{2} \times 1\frac{1}{2}$ ". £3.25.
65. PREHNITE. Le Bourg d'Oisans, Isere, France. Choice, lustrous, translucent lime green coloured rounded crystals to $\frac{1}{2}$ " in size, richly intergrown and scattered on gneiss matrix with minor Adularia in association. Fine specimen from this classic old location. 3×2 ". £13.

66. PYRITES. Rio Marina, Isle of Elba, Italy. Very bright, golden metallic sharp pyritohedral crystals ranging in size to $\frac{3}{4}$ " in diameter, attractively scattered and intergrown on lustrous black Hematite matrix. Choice specimen for display. $4\frac{1}{2} \times 3 \times 2\frac{1}{2}$ ". £16.50.
67. PYRITES. South Penstruthal Mine, Nr. Redruth, Cornwall. Bright, golden, well formed pyritohedral crystals to 1 cm. in size, intergrown with small elongated terminated crystals of Quartz on Quartz/Chlorite veinstuff. $2\frac{1}{4} \times 1\frac{1}{2} \times 1\frac{1}{2}$ ". £1.75.
68. PYROMORPHITE. South Mine, Broken Hill, N.S. Wales, Australia. Lustrous light yellowish green elongated hexagonal crystals mostly around 3 mm. in length, richly scattered over brownish Limonite on gossan matrix. $3\frac{1}{2} \times 2$ ". £4.50.
69. PYROMORPHITE. Kapi Mine, Dundas, Tasmania, Australia. Small, sparkling, dark green crystals encrusting Limonite matrix, with odd small crystals of orange Crocoite in association. Good material for micro study. Specimen A - $2 \times 1\frac{1}{4}$ ". £2.25; Specimen B - $1\frac{1}{2} \times 1\frac{1}{4}$ ". £1.75; Specimen C - With slightly more Crocoite in association. 1×1 ". £1.25.
70. PYROXENE. Renfrew Co., Ontario, Canada. Lustrous, dark greenish well formed terminated crystals to $\frac{1}{2}$ " in size, richly intergrown on massive Pyroxene/Quartz. $2\frac{1}{2} \times 1\frac{1}{2} \times 1\frac{1}{2}$ ". £4.50.
71. QUARTZ. Ale & Cakes Mine, Qwennap, Cornwall. A large, sharp, translucent milky coloured well formed pyramidal crystal. $2\frac{1}{2} \times 2$ " across the axis x $2\frac{1}{2}$ " long. £4.50.
72. REALGAR. Kapnik, Rumania. Choice, bright red, sharp well formed crystals to 7 mm. in size, thickly intergrown and lining large cavities in Quartz/greyish Native Arsenic matrix. Fine old time specimen, collected during the early part of last century. $4 \times 2\frac{1}{2} \times 1\frac{1}{2}$ ". £22.
73. SCHEELITE. Wheal Cock, St. Just, Cornwall. Very rich waxy creamy coloured octahedral crystal sections to 5 mm. in size, thickly intergrown and embedded in greenstone matrix. Bright blue fluorescence under short wave u.v. Specimen A - 3×2 ". £5.50; Specimen B - $2 \times 1\frac{1}{2}$ ". £3.25.
74. SCHEELITE. Carrock Mine, Caldbeck, Cumberland. Specimen A - Select, very rich, waxy creamy brown mass associated with a little milky Quartz and Feldspar. Superb blue fluorescence under short wave u.v. $3\frac{1}{2} \times 2 \times 1\frac{1}{2}$ ". £2.75; Specimen B - Rich waxy creamy brown masses intergrown with blackish Wolframite, silvery Arsenopyrite and a little Quartz. Superb blue fluorescence under shortwave u.v. $2\frac{1}{2} \times 1\frac{1}{4}$ ". £1.25.
75. SCHOLZITE. Reaphook Hill, Flinders Range, S. Australia. Fine, creamy coloured transparent elongated, terminated, needly bladed crystals to 8 mm. in length, radiated in sprays and thickly encrusting large areas on two sides of Limonitic matrix. $2\frac{1}{2} \times 1\frac{3}{4}$ ". £11.
76. NATIVE SILVER. Kongsberg, Norway. Very fine, rich, silvery metallic solid dendritic crystallised mass intergrown with a little Calcite. The surfaces of the specimen show numerous slightly tarnished, small, "fir trees" of crystallised silver. Weight of the specimen approx. 8 oz. avoirdupois. $1\frac{1}{2} \times 1\frac{1}{2} \times 1\frac{1}{2}$ ". £33.
77. NATIVE SILVER. Wolverine Mine, Keweenaw Pen., Michigan, U.S.A. Pure, solid, bright silvery nuggety metallic mass. $1 \times \frac{3}{4}$ ". £4.50.

78. NATIVE SILVER. Guanajuato, Mexico. Select, slightly tarnished, small curly wires protruding from Pyrite/Quartz veinstuff. Choice, thumb-nail sized specimen. £4.50.
79. SKUTTERUDITE. Bou Azzer, Anti-Atlas, Morocco. Fine, very bright, silvery sharp crystals to 8 mm. in size, thickly intergrown on massive Skutterudite. $2\frac{1}{2} \times 1\frac{1}{2} \times 1\frac{1}{2}$ ". £11.
80. SMITHSONITE. Proprietary Mine, Broken Hill, N.S. Wales, Australia. Lustrous, creamy white translucent rounded crystal aggregates to 5 mm. in size, intergrown in clusters and scattered in large cavities in a stalactitic cellular mass of botryoidal black Psilomelane. $3 \times 3 \times 2\frac{1}{2}$ ". £9.
81. SPHERE. Capelinha, Minas Gerais, Brazil. Choice, lustrous, transparent to translucent very sharp, line green, twinned crystals to $\frac{1}{2}$ " in size, attractively scattered over granular Epidote matrix with a $\frac{1}{4}$ " sized, sharp creamy crystal of Albite in association. 3×2 ". £16.50.
82. SPHALERITE. Boltsburn Mine, Rookhope, Co. Durham. Bright, black well formed crystals mostly around $\frac{1}{4}$ " in size, thickly encrusting both sides of matrix and associated with odd small pale purplish cubes of Fluorite and bright, metallic, crystals of Galena to $\frac{1}{2}$ " in size, $3\frac{1}{2} \times 3 \times 1\frac{1}{2}$ ". £7.
83. SPHALERITE. Wheal Jane, Kea, Cornwall. Large, lustrous black, sharp crystals to $\frac{3}{4}$ " on face edge forming a pure intergrown group which is slightly dusted in places with micro brassy Pyrite crystals. $3 \times 1\frac{1}{4}$ ". £3.25.
84. STANNITE. East Pool Mine, Illogan, Cornwall. Pure, metallic, tarnished mass associated with a little golden slightly iridescent Chalcopyrite and odd small fragments of Quartz. $3 \times 1\frac{1}{2} \times 1\frac{1}{4}$ ". £3.50.
85. STAUROLITE. Morbihan, Brittany, France. Dark brown well formed sharp 60° interpenetrant twinned single crystals ranging in size from $\frac{3}{4} \times 1$ " - 1×1 ". £1.25 each.
86. NATIVE SULPHUR. Agrigento, Sicily, Italy. Specimen A - Superb translucent bright yellow very large, sharp, doubly terminated crystals to $1\frac{1}{2}$ " in size, thickly intergrown on a fragment of drusy crystallised creamy white Aragonite. There are three very large crystals on the specimen and numerous others which are approx. $\frac{1}{2}$ " in size. Overall dimensions $3\frac{1}{2} \times 2\frac{1}{2} \times 1\frac{1}{2}$ ". £16.50; Specimen B - Select, translucent, bright yellow sharp crystals forming an intergrown group. Crystal faces approx. 1" in size. Overall size $1\frac{1}{2} \times 1\frac{1}{2} \times 1\frac{1}{2}$ ". £4.50; Specimen C - Choice, transparent, very sharp, well formed single crystals. Each approx. $1 \times \frac{1}{2} \times \frac{3}{4}$ ". £2.25 each.
87. TARBUTITE. Broken Hill, Zambia. Specimen A - Select, sparkling pale creamy green plate composed of numerous small, sharp, intergrown crystals with no matrix attached. $3 \times 2\frac{1}{2}$ ". £9.75; Specimen B - Fine bright pale creamy green small sharp crystals thickly intergrown and encrusting dark cellular Limonite. $1\frac{1}{2} \times 1\frac{1}{2}$ ". £6.50. These specimens were collected from the original opencast workings in the 1920s.
88. TETRAHEDRITE. Clitters Mine, Gunnislake, Cornwall. Very bright, metallic grey mass with odd crystal faces, intergrown with a little brownish Siderite. $2\frac{1}{2} \times 2$ ". £2.25.
89. TETRAHEDRITE variety FREIBERGITE. Cerro de Pasco, Peru. Choice, bright, silvery grey very sharp crystals, the largest being over 1 cm. in size, thickly intergrown on massive Tetrahedrite with odd small specks of golden Pyrites. $1\frac{1}{2} \times 1$ ". £11.

90. TORBERNITE. Wheal Basset, Illogan, Cornwall. Bright, emerald green, sharp tabular crystals mostly around 2 - 3 mm. in size, thickly intergrown and lining large cavities in reddened Quartz. $1\frac{1}{2} \times 1 \times \frac{3}{4}$ ". £7.
91. TOURMALINE variety DRAVITE. Yinnietarra, W. Australia. Superb, very large, lustrous brown sharp doubly terminated crystal $3\frac{1}{2} \times 3 \times 2$ " in size, with tw. other smaller doubly terminated crystals $2\frac{1}{2} \times 1\frac{1}{2} \times 1\frac{1}{2}$ " and $1\frac{1}{2} \times 1\frac{1}{2} \times 1$ ", attached. Overall size of the specimen. $4 \times 3\frac{1}{2} \times 2\frac{1}{2}$ ". Choice for cabinet display. £22.
92. VANADINITE. Mibladen, Nr. Midelt, Atlas Mts., Morocco. Specimen A - Fine, lustrous, deep red very sharp elongated hexagonal crystals, mostly around 4 - 5 mm. in size, thickly intergrown and freestanding on a light coloured matrix. $3\frac{1}{2} \times 2\frac{1}{2}$ ". £23; Specimen B - Very bright, translucent, light orangey sharp hexagonal crystals to 5 mm. in size, thickly intergrown on their edges and scattered over matrix. $3 \times 1\frac{1}{2} \times 1$ ". £14.
93. VIVIANITE. Coleraine, Victoria, Australia. A select cluster of translucent lustrous inky-blue sharp well terminated bladed crystals, the largest being approx. 1" in size, $1\frac{1}{2} \times \frac{3}{4} \times \frac{3}{4}$ ". £4.50.
94. WAVELLITE. Highdown Qry. Filleigh, Devon. Lustrous, creamy radiated crystal aggregates to 1 cm in diameter scattered on both sides of Dark Slate matrix. $2 \times 2 \times 1\frac{1}{2}$ ". £2.50.
95. WILLEMITE. Franklin, Sussex Co., New Jersey, U.S.A. Choice, well formed waxy yellowish brown terminated crystals to $\frac{3}{4}$ " in size, intergrown and partially embedded in creamy Silicite. $2 \times 1\frac{1}{2} \times 1\frac{1}{2}$ ". £11.
96. WITHERITE. South Moor Colliery, Lanchester, Co. Durham. Lustrous, translucent, creamy white sharp flat hexagonal crystals to $\frac{1}{4}$ " in size, stacked one upon another and lining cavities in massive Witherite. $2\frac{1}{2} \times 2 \times 1\frac{1}{4}$ ". £6.50.
97. WOLFRAMITE. Panasqueira, Beira-Beixa, Portugal. Choice, black, well terminated sharp striated single crystal showing much parallel growth and partially encrusted with small creamy brown lenticular crystals of Siderite on one face of the crystal. 2" long x 1" across the axis. £11.
98. WOLFRAMITE. Carrock Mine, Caldbeck, Cumberland. Select, bright black pure bladed crystal mass associated with minor milky Quartz and traces of creamy coloured Scheelite. $3\frac{1}{2} \times 2\frac{3}{4} \times 1\frac{1}{2}$ ". £4.50.
99. WULFENITE. Helena Mine, Schartzzenbach, Carinthia, Austria. Sharp, lustrous, orange yellow well formed tabular crystals, to $\frac{1}{2}$ " in size, intergrown and scattered over Dolomite matrix with small creamy coloured spiky crystals of Calcite in association. $2\frac{1}{2} \times 2$ ". £9.
100. WULFENITE. Old Yuma Mine, Nr. Tucson, Arizona, U.S.A. Transparent, pale yellowish delicate well formed tabular crystals to $\frac{1}{4}$ " in size, scattered on a cellular matrix with minor blackish Psilomelane. $2 \times 1\frac{3}{4}$ ". £4.50.
