

RICHARD W. BARSTOW

26, Tregeseal, St. Just,
Near Penzance, Cornwall, England.

TEL.NO.: St. Just 788880
(STD 0736)

V.A.T.No.: 132-7852-67

ORDERING INFORMATION

Mail orders are promptly filled and despatched on a 7-day examination basis, subject to approval. Immediate refund guaranteed on return of the specimen(s), in good condition.

Please quote the name and number of the specimen(s) required, and enclose P.O./Cheque with order. All prices are inclusive of V.A.T.

No charge is made for postage and packing, except for overseas customers and postage over 75p.

We reserve the right to make slight substitutions, if necessary, unless advised to the contrary.

Special requests and "wants lists" are welcome.

We hope that we may be of some service to you, and assure you of our best attention at all times.

AUGUST 1977

1. ADAMITE. Mina Ojuela, Mapimi, Durango, Mexico. Very choice lustrous lime-green coloured sharp terminated crystal sprays, to $\frac{1}{2}$ " in size, thickly encrusting and free standing on Limonitic matrix. Select specimen for display. $4 \times 2 \frac{1}{2} \times 1 \frac{1}{4}$ ". £33.00.
2. ALMANDINE GARNET. Zillertal, Tyrol, Austria. Lustrous, deep reddish, sharp dodecahedral crystals to $\frac{7}{8}$ " in size, scattered on and partially embedded in Chlorite Schist. $3 \frac{1}{2} \times 3 \times 1 \frac{1}{2}$ ". £11.00.
3. ANATASE. St. Gotthard, Ticino, Switzerland. Select, sharp, lustrous, bluish black crystals mostly around 4 mm. in size, scattered and free standing on matrix with a little Chlorite and crystallised Quartz. $2 \times 1 \frac{1}{2}$ ". £9.00.
4. ANGLESITE. Proprietary Mine, Broken Hill, N.S. Wales, Australia. Very fine sharp glassy transparent to slightly milky crystals mostly around 3 - 5 mm. in size, completely frosting a fine cellular reticulated mass of creamy bladed CERUSSITE crystals. Specimens of this quality, from this classic location are now rarely obtainable, and this sample was collected in the early part of this century. $4 \frac{1}{2} \times 3 \frac{1}{4} \times 2 \frac{1}{2}$ ". £90.00.
5. APATITE. Longdowns, Carrmenellis, Cornwall. Lustrous, transparent, bluish hexagonal crystals to 5 mm. in size, scattered on Pegmatite matrix with creamy crystallised Albite and a little Muscovite mica. $3 \times 2 \frac{1}{2} \times 1$ ". £2.50.
6. APATITE variety FRANCOLITE. Wheal Cock, St. Just, Cornwall. Small, transparent, platy hexagonal crystals intergrown on and encrusting brownish Limonite on milky Quartz. $1 \frac{1}{2} \times 1 \times 1$ ". £1.25.
7. APOPHYLLITE. Poona, Nr. Bombay, India. Choice, lustrous, creamy white sharp crystals to 1" in size, thickly intergrown on matrix with a little creamy bladed Laumontite. Select specimen for display. $4 \frac{1}{2} \times 3 \frac{1}{2} \times 1 \frac{1}{2}$ ". £11.00.
8. ARGENTITE. Freiberg, Saxony, Germany. Very rich heavy greyish metallic mass with a little creamy Calcite in association. $2 \times 1 \frac{1}{4} \times 1$ ". £8.00.
9. ARSENOPYRITE. Chalkidiki, Kassandra, Greece. Sharp, bright silvery, elongated terminated crystals to nearly 1 cm. in length, thickly intergrown and free standing on Arsenopyrite/Quartz matrix. $2 \times 1 \frac{1}{2} \times 1 \frac{1}{4}$ ". £8.00.
10. ATACAMITE. Mina La Farola, Copiapo, Atacama District, Chile. Choice, bright green, radiated "stars" of elongated crystals to 1" in diameter scattered on greenish blue Chrysocolla on Porphy matrix. Showy and colourful specimen. $4 \frac{1}{2} \times 3 \frac{1}{2} \times 2$ ". £14.00.

11. AURICHALCITE. 79 Mine, Gila Co., Arizona, U.S.A. Specimen A - Select, green to turquoise blue botryoidal crystal masses completely encrusting a cellular Limonitic matrix. Attractive specimen for display. $3 \times 2 \times 2$ ". £6.50; Specimen B - Choice, turquoise blue delicate needle crystal sprays scattered in a 1×1 " cavity in cellular matrix. Very attractive specimen. $2 \frac{1}{2} \times 1 \frac{1}{2} \times 1 \frac{1}{2}$ ". £4.50.
12. AZURITE. Bou Skour Mine, Atlas Mts., Morocco. Specimen A - A choice group composed of several lustrous deep blue terminated interlocking tabular crystals each approx. 1" in length. There is a partial green Malachite coating on the sides of some of the crystals. Overall size - $1 \frac{1}{4} \times 1 \frac{1}{4} \times 1$ ". £22.00; Specimen B - Interlocking group of three bright blue feathery terminated tabular crystals each approx. $\frac{7}{8}$ " in size. Overall size - $1 \frac{1}{4} \times 1 \times 2$ ". £14.00.
13. BARYTES. Cleator Moor, W. Cumberland. Lustrous, creamy to greyish, translucent terminated tabular crystals to 1" in size, intergrown on cellular Limonite/Barytes matrix. $2 \frac{1}{2} \times 2 \frac{1}{2} \times 1 \frac{1}{2}$ ". £7.00.
14. BARYTES. Wetgrove Mine, Wensleydale, Yorkshire. Specimen A - Lustrous, creamy, translucent sharp wedge shaped crystals, some showing internal zoning, to $\frac{1}{2}$ " in size, thickly intergrown and free standing on matrix. $3 \frac{1}{4} \times 2 \frac{1}{2} \times 1 \frac{1}{4}$ ". £4.50; Specimen B - Select lustrous creamy coloured wedge shaped crystals the largest being nearly 1" in size, intergrown and free standing on matrix. $2 \times 1 \frac{1}{2} \times 1$ ". £3.50.
15. BARYTOCALCITE. Nentsberry Mine, Alston Moor, Cumberland. Choice, tabular, crystal rosettes with a creamy white Barytes coating, mostly around $\frac{1}{2}$ " in size, thickly intergrown and completely encrusting both sides and the edges of Barytocalcite/Limestone matrix. This form of Barytocalcite is unique to this location and came from a section of the mine known as the Admiralty Flats. $5 \times 4 \frac{1}{2} \times 2$ ". £23.00.
16. BEUDANTITE. Wheal Carpenter, Gwinear, Cornwall. Specimen A - Small, sharp, sparkling deep olive coloured crystals richly encrusting Quartzose Gossan. $1 \frac{1}{2} \times 1 \frac{1}{2} \times 1$ ". £6.50; Specimen B - Minute sparkling olive coloured crystals richly encrusting both sides of Quartz matrix. The crystals are not as large as those on Specimen A. $2 \times 1 \frac{1}{2} \times 1 \frac{1}{4}$ ". £3.50; Specimen C - Minute sparkling olive coloured crystals encrusting Quartz matrix. $1 \frac{1}{2} \times 1$ ". £1.50.
17. NATIVE BISMUTH. Tavoy, Burma. An unusual rounded Pebble from an alluvial working showing a creamy white superficial alteration coating. $\frac{3}{4} \times 3 \times \frac{1}{2}$ ". £1.25.
18. BLOMSTRANDINE. Hiltvåg, Iveland, Norway. Pure lustrous pitchy brown mass showing conchoidal fracture. $1 \frac{1}{2} \times 1 \frac{1}{2} \times \frac{3}{4}$ ". £2.25.
19. BORNITE. Meldon, Dartmoor, Devon. Rich, purple tarnished masses in creamy white Wollastonite Hornfels with odd spots of silvery Arsenopyrite and a little MALAYAITE. Interesting and unusual association. Specimen A - $3 \times 2 \times 1$ ". £4.50; Specimen B - $2 \times 1 \frac{3}{4} \times 1 \frac{1}{4}$ ". £2.50.
20. CALCITE. Tsameb, Otavi, S.W. Africa. Select translucent sharp creamy rhombic crystals to $1 \frac{1}{4}$ " in size, intergrown on matrix. $3 \times 2 \times 1 \frac{1}{4}$ ". £6.50.
21. CALCITE. Croft Pit, Bigrigg, W. Cumberland. Specimen A - A choice, well developed mostly transparent lustrous "butterfly twin" sharp single crystal. $2 \frac{1}{4} \times 2 \times 1$ ". £23.00; Specimen B - Lustrous, sharp, transparent "butterfly twin" crystals to 1" in size, scattered on brecciated Hematite matrix. $2 \frac{1}{2} \times 1 \frac{3}{4} \times 1 \frac{1}{4}$ ". £17.00. Specimens showing this peculiar form of twinning are now extremely rare.
22. CALCITE. Boltsburn Mine, Rookhope, Co. Durham. Translucent, sharp, creamy to greyish hexagonal 'nail head' crystals to $1 \frac{1}{2}$ " in diameter thickly intergrown on a thin plate of Limestone, with the reverse side of the specimen showing odd pale violet coloured transparent cubic Fluorite crystals. $5 \frac{1}{2} \times 5 \frac{1}{2} \times 1 \frac{1}{2}$ ". £14.00.
23. CARPOOLITE. Schlaggenwald, Bohemia, C.S.S.R. Golden radiated fibrous crystalline masses associated with a little purplish Fluorite and Quartz. $1 \times 1 \times 1$ ". £1.25.
24. CASSITERITE. Kit Hill Mine, Callington, Cornwall. Lustrous, brownish black, twinned crystals to 5 mm. in size, lining cavities in a $1 \frac{1}{2} \times 1 \frac{1}{4}$ " area of Cassiterite/Tourmaline matrix. $2 \frac{1}{2} \times 2 \times 1 \frac{1}{2}$ ". £4.50.

25. CASSITERITE. Elsmore, N.S. Wales, Australia. Specimen A - A lustrous, brownish black, twinned crystal $\frac{1}{2}$ " in size, implanted on Chlorite/Quartz/Cassiterite matrix. $1\frac{1}{2} \times 1\frac{1}{2} \times 1\frac{1}{4}$ ". £4.50; Specimen B - Lustrous black twinned crystals to 5 mm. in size, scattered on Quartz/Chlorite matrix. $\frac{1}{2} \times \frac{1}{2} \times \frac{1}{2}$ ". £2.25.
26. CASSITERITE - ALLUVIAL PEBBLE. Gasson, Goss Moor, Cornwall. Select, large, heavy rounded alluvial pebble consisting of creamy coloured Quartz with much dark brownish Cassiterite and odd fragments of dark Slate. Weight approx. 2 lbs.; $3\frac{1}{2} \times 2\frac{1}{2} \times 2$ ". £6.50.
27. CERUSSITE. Tsameb, Otavi, S.W. Africa. A choice, sharp, mostly transparent, flat tabular single crystal showing interesting reddish internal zoning. $2\frac{1}{4} \times 1\frac{1}{4} \times \frac{1}{4}$ " thick. £6.50.
28. CHROME-CERUSSITE. Kapi Mine, Dundas, Tasmania, Australia. Specimen A - Lustrous creamy yellow twinned crystals to 5 mm. in size, richly scattered over cellular Limonitic matrix with the reverse side of the specimen showing silky white radiated crystal masses of DUNDASITE. $4 \times 2 \times 1\frac{1}{2}$ ". £7.00; Specimen B - Lustrous, creamy yellow, twinned crystals to 4 mm. in size, scattered on and lining cavities in cellular Limonitic matrix with odd patches of silky white DUNDASITE. $2\frac{1}{2} \times 1\frac{1}{2} \times 1\frac{1}{4}$ ". £3.25.
29. CHALCOCITE. St. Ives Consols Mine, St. Ives, Cornwall. Specimen A - Lustrous, greyish metallic sharp hexagonal crystals to 5 mm. in size, richly intergrown and encrusting a cellular Chalcocite/Quartz matrix. $2\frac{1}{2} \times 1\frac{1}{4} \times 1\frac{1}{2}$ ". £22.00; Specimen B - Choice, lustrous silvery grey, single sharp tabular crystals ranging in size from 1 cm. to 2 cm. in size, priced from £1.50 - £6.50 each depending in size and quality.
30. CHALCOCITE. Phoenix Mine, Linkinhorne, Cornwall. Rich, metallic grey vein section associated with milky Quartz and a little bright green Chrysocolla. $5 \times 3 \times 2$ ". £3.25.
31. CHALCOPYRITE. Arakawa, Ugo Province, Japan. Fine, bright brassy, twinned crystals to over $\frac{1}{2}$ " in size, richly encrusting Quartz matrix with odd transparent pyramidal Quartz crystals in association. Choice specimen for display. $4\frac{1}{2} \times 3 \times 1\frac{1}{2}$ ". £44.00.
32. CHALCOPYRITE variety Blister Copper. Dolcoath Mine, Camborne, Cornwall. Unusual light brassy botryoidal masses thickly encrusting Bornite/Chalcopyrite/Chlorite veinstuff, with the botryoidal masses invested with minute tarnished greyish Bornite crystals. $3\frac{1}{4} \times 3 \times 2$ ". £23.00.
33. CHILDRENITE. George & Charlotte Mine, Nr. Tavistock, Devon. Specimen A - Bright golden brown sharp transparent crystals to 2 mm. in size, thickly lining a 1" cavity in pale brown Siderite matrix. $2 \times 1\frac{1}{2} \times 1\frac{1}{4}$ ". £4.50; Specimen B - Small sparkling golden brown sharp crystals mostly around 1 mm. in size, richly encrusting Quartz/Pyrite veinstuff. $1\frac{1}{2} \times 1\frac{1}{2} \times 1$ ". £2.25.
34. CHRYSOTILE (Variety of Asbestos). Dundas, Tasmania, Australia. Select, parallel bands of creamy to golden silky Chrysotile cutting dark greenish Serpentine. $2\frac{3}{4} \times 2\frac{1}{2} \times 1\frac{1}{2}$ ". £3.25.
35. CLINOCLASE. Wheal Gorland, St. Day, Cornwall. Choice, lustrous, deep blue hemispherical crystal masses to nearly $\frac{1}{4}$ " in size, scattered on Gossany matrix with thin green crusts of Cornwallite. $2\frac{1}{4} \times 1\frac{1}{2} \times 1$ ". £9.00.
36. NATIVE COPPER. Wheal Virgin. Guennap, Cornwall. A heavy tarnished coffee coloured mass composed of numerous sharp crystals to 4 mm. in size, thickly covering crystalline Native Copper with no matrix attached. The specimen was collected early last century. $4\frac{1}{2} \times 3 \times 1\frac{1}{4}$ ". £23.00.
37. NATIVE COPPER. Levant Mine, Pendeen, Cornwall. Thin tarnished sheet on altered hematized Slate matrix. $3 \times 1\frac{1}{2} \times 1$ ". £1.50.
38. CROCOITE. Red Lead Mine, Dundas, Tasmania, Australia. Choice, bright orangey red interlocking mass of rod like crystals to $\frac{1}{2}$ " in length with very minor brownish Limonite in places. Select and colourful specimen for display. $3 \times 2\frac{1}{2} \times 2$ ". £44.00.

39. CUPRITE. Wheal Damsel, Guennap, Cornwall. Rich, deep reddish, small sharp octahedral crystals lining cavities in brecciated milky Quartz. $2 \times 1\frac{1}{2} \times 1\frac{1}{4}$ ". £3.25.
40. CUPRITE. Mufulira Mine, Zambia. Lustrous deep reddish sharp octahedral crystals to 3 mm. in size, richly scattered over a transparent tabular Selenite crystal. $1 \times \frac{1}{2}$ ". £3.25.
41. CUPRITE. Chessy, Rhone, France. An intergrown group of well formed modified octahedral crystals to 1 cm. in size, with a coating of greenish Malachite. Overall size - $15 \times 13 \times 14$ mm. £6.50.
42. CUPRITE variety Chalcotrichite. South Caradon Mine, St. Cleer, Cornwall. Minute reddish needly crystals lining cavities in a crystalline mass of Cuprite/ Native Copper. $1\frac{3}{4} \times 1\frac{1}{2} \times 1$ ". £4.50.
43. DANBURITE. Charcas, San Luis Potosi, Mexico. Very fine lustrous transparent to translucent creamy coloured sharp terminated elongated crystals to over $1\frac{1}{2}$ " in length, free standing on and completely covering matrix. Very fine undamaged specimen of this mineral which is excellent for display. $5\frac{1}{2} \times 4 \times 2\frac{1}{2}$ ". £85.00.
44. DAWSONITE. Francon Qry. St. Michel, Montreal, Quebec, Canada. Small creamy sharp needly crystals scattered in a 1×1 " cavity in matrix. $2 \times 1\frac{1}{2} \times 1\frac{1}{4}$ ". £4.50.
45. DESCLOISITE. Berg Aukas, Otavi, S.W. Africa. Lustrous, brownish mass of intergrown sharp spear like crystals to 1 cm. in size. $3 \times 2 \times 1\frac{1}{2}$ ". £11.00.
46. DIOPHASE. Tsumeb, Otavi, S.W. Africa. Specimen A - Bright emerald green sharp crystals to 8 mm. in size, lining a $1\frac{1}{4} \times 1$ " cavity in creamy Calcite matrix. $2\frac{1}{2} \times 2 \times 1\frac{1}{4}$ ". £16.50; Specimen B - Lustrous emerald green sharp crystals mostly around 3 - 4 mm. in size, thickly encrusting Dolomite matrix. $2\frac{1}{2} \times 2\frac{1}{2} \times 1\frac{1}{2}$ ". £14.00; Specimen C - Bright emerald green crystals to 4 mm. in size, richly encrusting areas of creamy crystallised Calcite with minor pale green Duftite in association. $1\frac{1}{2} \times 1\frac{1}{4} \times 1$ ". £6.50.
47. DUFRENITE. Phoenix Mine, Linkinhorne, Cornwall. Dark olive green radiated spherical crystalline masses to 5 mm. in diameter richly covering areas of hard Tourmaline/Quartz/Limonite matrix. $4 \times 2\frac{1}{2} \times 2$ ". £6.50.
48. EMBOLITE. Proprietary Mine, Broken Hill, N.S. Wales, Australia. Rich, waxy olive green cellular crystal mass associated with a little Limonitic Gossan. $1\frac{1}{2} \times 1\frac{1}{2} \times 1$ ". £14.00.
49. EUCOLITE. Stktesoya, Langesundsfjorden, Norway. Rich, lustrous, brownish masses associated with creamy feldspar, Aegirine, Lepidomelane and Natrolite. Specimen A - $2\frac{1}{2} \times 1\frac{1}{2} \times 1\frac{1}{2}$ ". £2.50; Specimen B - $1\frac{1}{2} \times 1\frac{1}{2} \times \frac{3}{4}$ ". £1.75.
50. FLUORITE. Blackdene Mine, Weardale, Co. Durham. Specimen A - Translucent seagreen coloured intergrown cubic crystals to 2" on face edge mostly encrusted with sharp doubly terminated milky Quartz crystals to $\frac{1}{2}$ " in size. $4 \times 3\frac{1}{2} \times 1\frac{1}{2}$ ". £9.00; Specimen B - Select transparent sea green coloured sharp intergrown cubic crystals mostly around $\frac{1}{2}$ " in size, thickly encrusting Fluorite/Galena matrix. $2\frac{1}{2} \times 2\frac{1}{2} \times 1\frac{1}{4}$ ". £5.50.
51. FLUORITE. Naica, Chihuahua, Mexico. Transparent pale greenish modified cube-octahedral crystals to $\frac{1}{2}$ " in size, scattered on Pyrite matrix and associated with well crystallised silvery grey GALENA and creamy crystal sprays of CALCITE. $3\frac{1}{2} \times 3\frac{1}{4} \times 1\frac{1}{4}$ ". £6.50.
52. FLUORITE. Minerva Mine, Rosiclare, Illinois, U.S.A. Specimen A - An intergrown group of large translucent to transparent yellowish crystals with an internal purple colour zoning, to 2" on face edge. The crystal faces are partially covered with sharp transparent spiky CALCITE crystals around $\frac{1}{2}$ " in length. $2\frac{1}{2} \times 2\frac{1}{2} \times 1\frac{1}{2}$ ". £8.00; Specimen B - A large sharp mostly transparent yellowish cubic crystal with an internal purple zoning with odd transparent slightly creamy spiky Calcite crystals to $\frac{1}{2}$ " in length, scattered in places. $2 \times 2 \times 1\frac{1}{4}$ ". £6.50.

53. FRONDELITE. Hagendorf, Bavaria, Germany. Very rich liver brown radiated banded mass with very minor Quartz in places. $2x1\frac{1}{2}x1\frac{1}{4}$ ". £4.50.
54. GALENA. Blackdene Mine, Weardale, Co. Durham. Bright silvery grey sharp modified cube-octahedral crystals to $\frac{1}{4}$ " in size, richly scattered over both sides of Limestone matrix with odd small Fluorite and Calcite crystals in association. Nice specimen for display. $6x4\frac{3}{4}x2\frac{1}{2}$ ". £13.00.
55. GALENA. Neudorf, Harz, Germany. Bright silvery grey modified skeletal crystals to 1 cm. in size, thickly intergrown on cellular pale brown crystallised Siderite matrix. $2x1\frac{1}{2}x1$ ". £5.50.
56. NATIVE GOLD. Verespatak, Bihar Mts., Rumania. A thin golden sheet-like mass showing good octahedral crystal faces and growth patterns under magnification. 15×9 mm. £6.50.
57. GROSSULAR GARNET variety HESSONITE. Val d'Ala, Piedmont, Italy. Bright orangey coloured sharp crystals to $\frac{1}{4}$ " in size, richly scattered over massive Garnet matrix with a little greenish crystallised Clinocllore in association. $5x2\frac{1}{2}x2$ ". £14.00.
58. GYPSUM variety SELENITE. Girgenti, Sicily, Italy. Select, translucent, sharp terminated crystals mostly around 1" in size, intergrown and free standing on a cellular matrix. Attractive specimen for display. $5\frac{1}{2}x3\frac{3}{4}x2\frac{1}{2}$ ". £11.00.
59. HEDENBERGITE variety SAHLITE. Sala Mine, Vestmanland, Sweden. Lustrous olive coloured bladed crystalline mass intergrown with dark brownish Sphalerite. $2\frac{1}{2}x2\frac{1}{4}x1$ ". £2.75.
60. HEMATITE. Wheel Cock, St. Just, Cornwall. A $1\frac{1}{4}$ " cavity in Quartzose matrix lined with lustrous black thick hexagonal crystals to 7 mm. in size. $2x1\frac{1}{4}x1$ ". £3.50.
61. HEMATITE. Cavradi, Val Tavetsch, Grisons, Switzerland. Lustrous, black, platy crystal showing striated faces, $\frac{3}{4}$ " in size, with reddish brown rutile crystals orientated on the faces and with a $\frac{3}{4}$ " glassy tabular Quartz crystal attached. Overall size - $1x\frac{7}{8}x\frac{1}{2}$ ". £7.00.
62. HEMIMORPHITE. Santa Eulalia, Chihuahua, Mexico. Specimen A - Very choice, transparent, elongated terminated tabular crystals mostly around 1 cm. in length, completely encrusting the surface and sides of brownish Limonite matrix. Select specimen for display. $5\frac{1}{2}x3\frac{1}{4}x2\frac{1}{4}$ ". £24.00.; Specimen B - As Specimen A - with the crystals encrusting the surface and parts of the reverse of the specimen. $4x3x1\frac{1}{2}$ ". £13.00.; Specimen C - As Specimen A - With the crystals thickly encrusting both sides of the matrix. $2\frac{1}{2}x1\frac{1}{2}x1\frac{1}{4}$ ". £4.75.
63. HEMIMORPHITE. 79 Mine, Gila Co., Arizona, U.S.A. Pale turquoise blue silky botryoidal masses scattered in a $1\frac{1}{2}x1$ " cavity in greenish blue Chrysocolla rich matrix with small bright creamy rhombic Calcite crystals and a 5 mm. sized tabular Cerussite crystal in association. Very colourful specimen. $3x2x2$ ". £6.50.
64. JAMESONITE. Sombrereta, Zacatecas, Mexico. Specimen A - An interlocking mass of bright silvery grey bladed crystals to $\frac{1}{2}$ " in length on fibrous crystalline Jamesonite. $2x1\frac{1}{2}x1$ ". £8.00.; Specimen B - Bright silvery grey bladed crystals to $\frac{1}{2}$ " in length lying flat on intergrown brassy Pyrites crystals. $1\frac{1}{2}x1\frac{1}{4}$ ". £5.50.
65. LEADHILLITE. Susanna Mine, Leadhills, Lanarkshire. Intergrown creamy lustrous platy crystals to 4 mm. in size, on Gossany matrix. $\frac{3}{4}x\frac{1}{4}$ ", £4.50.
66. LEPIDOLITE. Tordal, Telemark, Norway. Specimen A - Bright lavender coloured thick platy crystal 'book' with minor creamy CLEAVELANDITE and Quartz in association. $3x2\frac{1}{4}x1\frac{1}{4}$ ". £3.25; Specimen B - Bright lavender coloured platy sheets on creamy Cleavelandite with a little greenish Fluorite in association. $2\frac{1}{2}x2x1\frac{1}{4}$ ". £1.25.
- LEVYNITE. Parkgate Qry. Templepatrick, Co. Antrim, N. Ireland. A $\frac{3}{4}$ " sized cavity in Basalt matrix lined with sharp creamy crystals to 4 mm. in size. $1\frac{1}{2}x1\frac{1}{4}x1$ ". £1.50.

68. LINARITE. Blanshard Claims, Bingham, New Mexico, U.S.A. Small bright blue crystals richly scattered over large areas of Quartz matrix. $2\frac{1}{2} \times 2 \times 1\frac{1}{2}$ ". £4.00.
69. MALACHITE. Wheel Unity, Gwennap, Cornwall. Rich, lustrous green, fibrous botryoidal mass associated with deep reddish massive Cuprite. $2\frac{1}{2} \times 2 \times 1\frac{1}{2}$ ". £7.00.
70. MANGANITE. Jackson Mine, Negaunee, Michigan, U.S.A. Choice, bright black, sharp terminated crystals mostly around 3 - 4 mm. in size, thickly encrusting a ferruginous matrix. $2\frac{1}{2} \times 2 \times 1\frac{1}{2}$ ". £33.00.
71. MANGANDANTALITE. Pilbarra, W. Australia. Pure, heavy, brownish crystalline mass with no matrix attached. $1\frac{1}{4} \times 1\frac{1}{4} \times 1$ ". £1.50.
72. MARCASITE. Parc Mine, Llanrust, Carnarvonshire. Bright brassy sharp bled crystals to 1 cm. in size, thickly intergrown and encrusting creamy Calcite matrix. $1\frac{1}{4} \times 1\frac{1}{4}$ ". £1.50.
73. MIMETITE. Santa Eulalia, Chihuahua, Mexico. Select lustrous greenish yellow well formed skeletal hexagonal crystals to 4 mm. in size, richly scattered over creamy rhombic Calcite crystals covering Calcite matrix. $2\frac{1}{2} \times 2 \times 1\frac{1}{2}$ ". £11.00.
74. MIMETITE variety CAMPYLITE. Drygill Mine, Caldbeck, Cumberland. Unusual lustrous yellowish to orange barrel shaped crystals and crystal aggregates to $\frac{1}{2}$ " in size, scattered over Quartz/Psilomelane matrix with well crystallised creamy white tabular BARYTES crystals to 1" in size in association. $4 \times 2\frac{1}{2} \times 2$ ". £9.00.
75. MOLYBDENITE. Hingston Down, Callington, Cornwall. Very rich lead-grey platy crystalline masses covering creamy Aplite matrix. $4 \times 2\frac{1}{4} \times 1\frac{1}{2}$ ". £4.50.
76. OLIVENITE. Wheel Gorland, St. Day, Cornwall. Specimen A - Choice lustrous olive green velvety needly crystals thickly lining numerous large cavities in Quartzose matrix. $2\frac{1}{2} \times 2 \times 1\frac{1}{4}$ ". £5.50; Specimen B - Lustrous dark olive green small sharp crystals thickly lining cavities in Quartzose Gossan. $1\frac{1}{2} \times 1\frac{1}{2} \times 1$ ". £2.25.
77. ORPIMENT. Napoleon Vein, Quiruvilca, Libertad Dept., Peru. Specimen A - Very choice; transparent to translucent sharp bright terminated sherry coloured crystals mostly around $\frac{1}{4}$ " in size thickly intergrown and covering Quartz/Pyrite matrix. The reverse side of the specimen shows odd small elongated sharp silvery red crystals of HUTCHINSONITE in association with a little crystallised Orpiment. Very fine specimen for display. $6 \times 5 \times 3\frac{1}{2}$ ". £68.00; Specimen B - Very large lustrous translucent sherry coloured crystals to nearly $\frac{3}{4}$ " in size, thickly encrusting and free standing on Quartz/Pyrite matrix with odd small sharp elongated crystals of HUTCHINSONITE. Fine specimen for display, though the crystals are much larger they are not as bright as in Specimen A. $5 \times 5 \times 2\frac{1}{2}$ ". £64.00; Specimen C - Very choice transparent to translucent sharp terminated sherry coloured crystals to $\frac{1}{2}$ " in size, thickly scattered over Quartz/Pyrite matrix with odd elongated HUTCHINSONITE crystals to 4 mm. in length. $3\frac{1}{2} \times 2\frac{1}{2} \times 1\frac{1}{2}$ ". £54.00; Specimen D - Select light sherry coloured translucent sharp terminated crystals to $\frac{1}{4}$ " in size, thickly intergrown and encrusting Quartzose matrix with odd small sharp Hutchinsonite crystals. $3\frac{1}{2} \times 2\frac{1}{2} \times 1\frac{1}{2}$ ". £44.00; Specimen E - Choice, lustrous sherry coloured sharp terminated crystals mostly around $\frac{1}{4}$ " in size, clustered in aggregates and scattered over Quartz/Pyrite matrix. $4 \times 2\frac{1}{2} \times 1\frac{1}{2}$ ". £24.00; Specimen F - Select, lustrous, dark sherry coloured sharp terminated crystals mostly around $\frac{1}{4}$ " in size, thickly intergrown with no matrix attached. $3\frac{1}{2} \times 2$ ". £14.00; Specimen G - Bright translucent sharp sherry coloured crystals mostly around $\frac{1}{4}$ " in size, thickly intergrown on crystalline Orpiment. $1\frac{1}{2} \times 1\frac{1}{4} \times 1$ ". £7.00; Specimen H - Lustrous sharp sherry coloured crystals around $\frac{1}{4}$ " in size, forming a pure intergrown group. $1\frac{1}{2} \times 1$ ". £4.50; Specimen I - Select groups of sharp terminated sherry coloured crystals around $\frac{1}{4}$ " in size, Specimens each approx. $\frac{1}{4} \times \frac{1}{4}$ ". £1.25 each.
78. PARASOPEITE. Kopje No.1, Broken Hill, Zambia. Small groups of sharp intergrown crystals of a pale greenish colour, with crystals to 5 mm. in size, Specimens each approx. $\frac{1}{2} \times \frac{1}{2}$ " in size, £1.50 each.

79. PHARMACOSIDERITE. Burdell Gill Mine, Caldbeck, Cumberland. Small bottle green sharp cubic crystals richly lining small cavities in ferruginous matrix. $2\frac{1}{2} \times 2\frac{1}{2} \times 1\frac{1}{4}$ ". £2.25.
80. PHOSPHURANYLITE. Wheal Edward, St. Just, Cornwall. Rich, bright yellow crusts covering large areas of dark uraniferous veinstuff. $2\frac{3}{4} \times 1 \times 1$ ". £3.25.
81. PROUSTITE. Chanercillo, Atacama, Chile. Choice, blood red sharp transparent terminated crystals to 5 mm. in size, intergrown and scattered in cavities in creamy crystalline Calcite matrix with small well formed Calcite crystals in association. Select rich old specimen. $3\frac{1}{2} \times 3\frac{1}{2} \times 1\frac{1}{2}$ ". £84.00.
82. PSEUDOMALACHITE. N'Change Mine, Nr. Kitwe, Zambia. Very rich deep green banded mass with a partial mamillary surface associated with a little translucent Quartz. $3\frac{1}{2} \times 3 \times 2$ ". £18.00.
83. PYRARGYRITE. Valenciana Mine, Guanajuato, Mexico. Lustrous irridescently tarnished sharp crystals to 4 mm. in size, lining numerous cavities in pure massive deep reddish Pyrrargyrite. $1\frac{1}{2} \times 1\frac{1}{2} \times 1\frac{1}{4}$ ". £28.00.
84. PYRITES. Wheal Jane, Kea, Cornwall. Specimen A - Select light golden small sharp modified cubic crystals to 4 mm. in size, completely encrusting a dome like group of milky pyramidal Quartz crystals. Attractive specimen for display. $4 \times 3 \times 2\frac{1}{2}$ ". £8.00; Specimen B - Choice, slightly tarnished sharp cubic crystals to over $\frac{1}{2}$ " in size, associated with elongated transparent terminated Quartz crystals to 1" in length on Quartz/Sphalerite matrix. Very attractive specimen. $3\frac{1}{2} \times 2 \times 1\frac{1}{4}$ ". £6.50.
85. PYRITES. Quiruvilca, Lahibertad Dept., Peru. Specimen A - Very fine bright brassy sharp pyritahedral crystals to $1\frac{1}{2}$ " in size intergrown and completely covering massive Pyrite matrix. Superb specimen for display. $7 \times 4\frac{1}{2} \times 1\frac{1}{2}$ ". £85.00; Specimen B - Choice very bright brassy sharp pyritahedral crystals to nearly 1" in size, intergrown and completely covering massive Pyrite. $5\frac{1}{2} \times 4\frac{1}{2} \times 2$ ". £54.00. Another superb display specimen; Specimen C - Very sharp bright brassy cubic crystals to nearly 1 cm. in size, thickly scattered over the surface and one side of crystalline Pyrite matrix. Excellent for display. $4\frac{1}{2} \times 3\frac{1}{2} \times 1\frac{1}{2}$ ". £33.00; Specimen D - Fine bright brassy sharp cubic crystals to $\frac{1}{2}$ " in size, thickly covering both sides of Pyrite/Quartz matrix. Choice for display. $3\frac{1}{2} \times 2\frac{1}{2} \times 1\frac{1}{2}$ ". £14.00.
86. PYROMORPHITE. South Mine, Broken Hill, N.S. Wales, Australia. Small lustrous light green spiky crystals richly scattered over blackish manganese coated Quartz matrix. $3\frac{1}{2} \times 2\frac{1}{2} \times 1$ ". £4.50.
87. PYROPHYLLITE. Indian Gulch, Mariposa Co., California, U.S.A. Rich creamy coloured radiated crystalline masses to $\frac{3}{4}$ " in diameter thickly covering matrix. $3 \times 3 \times 1\frac{1}{4}$ ". £4.50.
88. QUARTZ. Dauphine Alps, Isere, France. An unusual cluster of transparent sharp terminated crystals showing partial skeletal structure. Individual crystals range up to 1" in length and are grown one upon another. Overall size $3\frac{1}{2} \times 3 \times 1\frac{1}{2}$ ". £14.00.
89. QUARTZ variety AMETHYST. Guanajuato, Mexico. Transparent sharp terminated light amethystine coloured crystals mostly around $\frac{1}{2}$ " in length free standing on Quartz matrix with odd creamy Calcite crystals to $\frac{1}{4}$ " in size in association. Attractive display specimen. $2\frac{1}{2} \times 2\frac{1}{2} \times 1\frac{3}{4}$ ". £8.50.
90. RISORITE. Risor, Norway. Rich, lustrous deep brown mass with minor Feldspar in association. 1×1 ". £2.25.
91. SCHOLZITE. Reaphook Hill, Flinders Range, S. Australia. Sharp creamy coloured terminated needle crystals to $\frac{1}{4}$ " in length, thickly lining numerous large cavities in cellular iron matrix. $2\frac{1}{4} \times 2\frac{1}{2} \times 1\frac{1}{4}$ ". £8.00.
92. SCORODITE. Hemerdon Ball Openworks, Plympton, Devon. Select lustrous bluish green sharp crystals to 3 mm. in size, richly covering large areas of Quartz/Greisen matrix. $2 \times 2 \times 1$ ". £6.50.

93. NATIVE SILVER. Smuggler Mine, Colorado, U.S.A. Small silvery flakes and masses scattered through Quartz veinstuff with much greyish POLYBASITE and odd specks of Pyrite. $2 \times 1\frac{1}{2} \times 1\frac{1}{2}$ " $\frac{1}{2}$ £6.50.
94. SMITHSONITE. Ball Eye Mine, Cromford, Derbyshire. Creamy coloured waxy Smithsonite coating and replacing 'dog tooth' Calcite crystals to $\frac{1}{2}$ " in size, intergrown on both sides of cellular Smithsonite matrix. $2 \times 1\frac{1}{2} \times 1\frac{1}{2}$ ". £4.50.
95. SPHALERITE. Rampgill Mine, Nenthead, Cumberland. Choice, bright black, sharp crystals to 1 cm. in size, completely covering both sides of a botryoidal matrix with minor drusy crystallised Quartz in association. $3\frac{1}{2} \times 2 \times 1\frac{1}{4}$ ". £6.50.
96. STANNITE. Mulberry Mine, Lanivet, Cornwall. Rich, tarnished, metallic masses intergrown with Chalcopyrite in Quartz veinstuff. $2 \times 1\frac{3}{4} \times 1\frac{1}{4}$ ". £2.25.
97. STIBNITE. Knipes Mine, New Cumnock, Ayrshire. Very rich bright silvery grey pure bladed crystalline masses with very minor Quartz. Specimen A - $4 \times 4 \times 3$ ". £8.00; Specimen B - $3\frac{1}{2} \times 3 \times 1\frac{1}{2}$ ". £4.50; Specimen C - $2\frac{1}{2} \times 2\frac{1}{2} \times 1\frac{1}{2}$ ". £3.25; Specimen D - $2\frac{1}{2} \times 2\frac{1}{2} \times 1\frac{1}{2}$ ". £1.75.
98. STIBICONITE. Knipes Mine, New Cumnock, Ayrshire. Specimen A - Creamy yellow masses replacing greyish Stibnite richly scattered through Quartzose veinstuff. $3 \times 2 \times 1\frac{1}{2}$ ". £2.50; Specimen B - Rich light yellow mass replacing bladed Stibnite associated with greyish Semsyite and a little cellular Quartz. $1\frac{1}{2} \times 1\frac{1}{2}$ ". £1.50.
99. STILBITE. The Storr, Isle of Skye, Scotland. Lustrous, creamy coloured sharp tabular crystals mostly around $\frac{1}{4}$ " in size, thickly encrusting Basalt matrix. $3 \times 2 \times 1\frac{1}{2}$ ". £3.25.
100. NATIVE SULPHUR. Agrigento, Sicily, Italy. Select, mostly transparent yellowish well formed large single crystal showing attachment on the reverse side. $1\frac{1}{2} \times 1\frac{1}{4} \times 1$ ". £3.25.
101. TARBUTTITE. Broken Hill, Zambia. Lustrous, sharp, transparent, colourless crystals 2 - 3 mm. in size, thickly encrusting both sides of cellular brown Limonitic matrix. $2 \times 2 \times 1$ ". £8.75.
102. TETRAHEDRITE. Quiruvilca, Libertad Dept., Peru. Choice, very bright, greyish metallic sharp crystals mostly around $\frac{1}{4}$ " in size, richly scattered over massive Tetrahedrite/Pyrite matrix. Attractive specimen. $4\frac{1}{2} \times 3 \times 1\frac{1}{2}$ ". £24.00.
103. TOPAZ. Tepetate, San Luis Potosi, Mexico. Sharp terminated transparent pale sherry coloured crystals to 1 cm. in size, free standing on cellular matrix. 1×1 ". £3.75.
104. TOURMALINE. Bovey Tracey, Devon. A lustrous black nearly complete crystal 15×15 mm. in size, and a smaller terminated crystal 7×7 mm. in size, implanted on pinkish granite with pinkish crystallised Feldspar and a little Quartz in association. $2\frac{1}{2} \times 2 \times 1$ ". £4.50.
105. TOURMALINE. Haslaw, Bohemia, C.S.S.R. A sharp bright black crystal 1 cm. in size, implanted in a cavity in Granitic matrix with milky crystallised Quartz and odd smaller Tourmaline crystals. $2\frac{1}{2} \times 2 \times 1\frac{1}{4}$ ". £5.00.
106. WITHERITE. Settlingstones Mine, Hexham, Northumberland. Intergrown well formed creamy coloured crystals to 1 cm. in size, covering a dome shaped matrix with a frosting of small sharp creamy Calcite crystals. $2\frac{1}{2} \times 1\frac{3}{4} \times 1\frac{3}{4}$ ". £3.25.
107. WOLFRAMITE. Wheal Kitty, St. Agnes, Cornwall. Very rich, lustrous black, bladed mass associated with a little silvery Arsenopyrite and showing a 1" area of distinct elongated tabular crystals in parallel growth on one side. $2\frac{1}{2} \times 2 \times 1\frac{1}{2}$ ". £6.50.
108. WULFENITE. San Francisco Mine, Sonora, Mexico. Specimen A - Fine bright yellowish sharp tabular crystals to nearly $\frac{1}{4}$ " in size, free standing and scattered on matrix with crusts of pale yellowish Mimetite. Nice display specimen. $2 \times 1\frac{1}{2} \times 1\frac{1}{4}$ ". £16.50; Specimen B - Rich, bright yellow, sharp, transparent platy crystals to 1 cm. in size, thickly intergrown on matrix with a little orangey Mimetite. $1\frac{1}{2} \times 1\frac{1}{4} \times \frac{3}{4}$ ". £4.50.
